UNIVERSITY OF MUMBAI

Revised syllabus (Rev- 2016) from Academic Year 2016 -17 Under

FACULTY OF TECHNOLOGY

Electrical Engineering

Second Year with Effect from AY 2017-18
Third Year with Effect from AY 2018-19
Final Year with Effect from AY 2019-20

As per **Choice Based Credit and Grading System** with effect from the AY 2016–17

From Co-coordinator's Desk:

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated, and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Technology of University of Mumbai, has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

Faculty of Technology, University of Mumbai, in one of its meeting unanimously resolved that, each Board of Studies shall prepare some Program Educational Objectives (PEO's) and give freedom to affiliated Institutes to add few (PEO's), course objectives and course outcomes to be clearly defined for each course, so that all faculty members in affiliated institutes understand the depth and approach of course to be taught, which will enhance learner's learning process. It was also resolved that, maximum senior faculty from colleges and experts from industry to be involved while revising the curriculum. I am happy to state that, each Board of Studies has adhered to the resolutions passed by Faculty of Technology, and developed curriculum accordingly. In addition to outcome based education, **Choice Based Credit and Grading System** is also introduced to ensure quality of engineering education.

Choice Based Credit and Grading System enable a much-required shift in focus from teacher-centric to learner-centric education. Since the workload estimated is based on the investment of time in learning, not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. University of Mumbai has taken a lead in implementing the system through its affiliated Institutes. Faculty of Technology has devised a transparent credit assignment policy adopted ten points scale to grade learner's performance. Choice Based Credit and Grading System were implemented for First Year of Engineering (Undergraduate) from the academic year 2016-2017. Subsequently this system will be carried forward for Second Year of Engineering (Undergraduate) in the academic year 2017-2018 and so on.

Dr. Suresh K. Ukarande Coordinator, Faculty of Technology, Member - Academic Council University of Mumbai, Mumbai

Preamble:

The overall technical education in our country is changing rapidly in manifolds. Now it is very much challenging to maintain the quality of education with its rate of expansion. To meet present requirement a systematic approach is necessary to build the strong technical base with the quality. Accreditation will provide the quality assurance in higher education and to achieve recognition of the institution or program meeting certain specified standards. The main-focus of an accreditation process is to measure the program outcomes, essentially a range of skills and knowledge that a student will have at the time of graduation from the program that is being accredited. Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

I, as a Chairman, Board of Studies in Electrical Engineering of University of Mumbai, happy to state here that, Program Educational Objectives (PEOs) were finalized for undergraduate program in Electrical Engineering, more than ten senior faculty members from the different institutes affiliated to University of Mumbai were actively participated in this process. Few PEOs and POs of undergraduate program in Electrical Engineering are listed below;

Program Educational Objectives (PEOs)

- > Graduates will have successful career in industry or pursue higher studies to meet future challenges of technological development.
- For Graduates will develop analytical and logical skills that enable them to analyze and design Electrical Systems and their Controls.
- > Graduates will achieve professional skills to expose themselves by giving an opportunity as an individual as well as team.
- ➤ Graduates will undertake research activities in emerging multidisciplinary fields.

Program Outcomes (POs)

- ➤ Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- ➤ Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

- ➤ Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- ➤ Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- ➤ The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- ➤ Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- ➤ Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- ➤ Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- ➤ Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- ➤ **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- ➤ **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Dr. S. R. Deore, Chairman, Board of Studies in Electrical Engineering, Member - Academic Council University of Mumbai

Course Objectives	 To Develop knowledge and skill based foundation in Mathematics amongst students needed for the field of Electrical Engineering To provide students with mathematics fundamentals necessary to formulate, solve and analyses complex engineering problems. To prepare student to apply reasoning informed by the contextual knowledge to Electrical Engineering practice. To prepare students to work as part of teams on multi-disciplinary projects.
Course Outcomes	 Students will be able To demonstrate basic knowledge of Laplace Transform, Fourier series, Bessel Functions, Vector Algebra and Complex Variable. To identify and Model the problems of the field of Electrical Engineering and solve it.

Module	Contents	Hours						
1	Laplace Transform	07						
	Laplace Transform (LT) of Standard Functions: Definition of							
	Laplace transform, Condition of Existence of Laplace transform,							
	Laplace transform of e^{at} , $Sin(at)$, $cos(at)$, $sinh(at)$, $cosh(at)$, t^n							
The	Heaviside unit step function, Dirac-delta function, Laplace transform							
	of Periodic function							
	Properties of Laplace Transform: Linearity, first shifting theorem,							
	second shifting theorem, multiplication by t^n , Division by t , Laplace							
1/1/1/2	Transform of derivatives and integrals, change of scale, convolution							
	theorem, Evaluation of integrals using Laplace transform.							
2	Inverse Laplace Transform & its Applications:	06						
	Partial fraction method, Method of convolution, Laplace inverse by							
	derivative.							
	Applications of Laplace Transform: Solution of ordinary							
	differential equations, Solving RLC circuit differential equation of							

	first order and second order with boundary condition using Laplace	
	transform (framing of differential equation is not included).	
3	Fourier Series:	11
	 Introduction: Orthogonal and orthonormal set of functions, Introduction of Dirichlet's conditions, Euler's formulae. Fourier Series of Functions: Exponential, trigonometric functions of any period =2L, even and odd functions, half range sine and cosine 	
	series	
	Complex form of Fourier series, Fourier integral representation,	
	Fourier Transform and Inverse Fourier transform of constant and exponential function.	
4	Vector Algebra & Vector Differentiation:	07
	Review of Scalar and Vector Product: Scalar and vector product of	
	three and four vectors, Vector differentiation, Gradient of scalar point	
	function, Divergence and Curl of vector point function.	
	Properties: Solenoidal and irrotational vector fields, conservative	
	vector field.	
5	Vector Integral	06
	Line integral, Green's theorem in a plane, Gauss' divergence theorem	
	and Stokes' theorem	
6	Complex Variable & Bessel Functions:	11
	Analytic Function: Necessary and sufficient conditions (No Proof),	
	Cauchy Reiman equation Cartesian form (No Proof) Cauchy Reiman	
	Equation in polar form (with Proof), Milne Thomson Method and it	
	application, Harmonic function, orthogonal trajectories.	
	Mapping: Conformal mapping, Bilinear transformations, cross ratio,	
	fixed points	
	Bessel Functions: Bessel's differential equation, Properties of Bessel	
	function of order $+1/2$ and	
	-1/2, Generating function, expression of	
	$\cos(x\sin\theta)$, $\sin(x\sin\theta)$ in term of Bessel functions

Assessment:

Internal Assessment consists of two tests out of which; one should be compulsory class test (on minimum 02 Modules) and the other is either a class test or assignment on live problems or course project

Term work:

Term work shall consist of minimum eight tutorials and assignments (minimum 2).

The distribution of marks for term work shall be as follows:

Tutorials :15 marks
Assignments :05 marks
Attendance (Theory and Tutorial) :05 marks

The final certification and acceptance of term work ensures minimum passing in the term work.

- 1. Question paper will comprise of 6 questions, each carrying 20 marks.
- 2. Total four questions need to be solved.
- 3: Q.1 will be compulsory, based on entire syllabus wherein sub questions of 2 to 5 marks will be asked.
- 4: Remaining question will be randomly selected from all the modules.

Course Objectives	 To teach the basic concept of various electronic devices, circuits and their application To develop ability among students for problem formulation, system design and solving skills
Course Outcomes	 • To Identify the different types of diodes and their applications in electronic circuits • To analyze the dc and ac parameters of BJT JFET, and differential amplifiers • To demonstrate and analyze the effects of various parameters on performance of BJT and JFET amplifier. • To analyze the effects of negative feedback in BJT and JFET amplifiers. • To identify the effects of cascading in BJT and JFET amplifiers. • To analyze the different types of oscillators.

Module	Contents	Hours
1	Diode:	80
	Basic construction, Operation and characteristics of diode,	
	Application of diode as clipper and clampers, Construction,	
	Principle of operation and application of special diode – 1) Zener,	
	2) LED, 3) Schottky, 4) Photodoide. Full Wave Bridge Rectifier	
	with and without Filter, Analysis: specification of the devices and	
	components required for C, LC, CLC filter.	
2	Bipolar Junction Transistor:	14
	Construction and Characteristics of various configurations of	

	BJT. Biasing Circuits: Types, dc circuit analysis, load line,	
	thermal runaway, stability factor analysis, thermal stabilization	
	and Compensation.	
	Modeling: Small signal analysis of CE configurations with	
	different biasing network using h-parameter model. Introduction	
	to re-model and hybrid-pi model.	
	Amplification derivation of expression for voltage gain, current	
	gain, input impedance and output impedance of CC, CE	
	amplifiers, Study of frequency response of BJT amplifier.	
3	Field Effect Transistor:	08
	Types, construction and their characteristics, Biasing circuits for	
	FET amplifiers, FET small signal analysis, derivation of	
	expressions for voltage gain and output impedance of CS	
	amplifiers.	
	MOSFET- Types, construction and their characteristics	
4	Feedback Amplifier:	07
	Introduction to positive and negative feedback, negative feedback	
	-current, voltage, Series and Shunt type. It's effect on input	
	impedance, output impedance, voltage gain, current gain and	
	bandwidth	
5	Cascade amplifiers:	03
	Types of coupling, effect of coupling on performance of BJT and	
	JFET amplifiers, Darlington-pair	
6	Oscillators:	08
	Positive feedback oscillators, frequency of oscillation and	
	condition for sustained oscillations of a) RC phase shift, b)Wien	
	bridge, c)Hartley/ Colpitts with derivations, crystal Oscillator,	
	UJT relaxation oscillator

Module	Content	Hours
1	Principles of Analog Instruments:	16
	Errors in Measurement, Difference between Indicating and Integrating	
-	Instruments. Moving coil and Moving iron Instruments, Ammeters	
	Shunts & Voltmeter Multiplier. Extension of ranges by using shunt,	
	Multipliers, Dynamometer type Wattmeter & Power Factor meters.	
	Reed Moving Coil type Frequency Meters. Weston type Synchroscope.	
	DC Permanent magnet moving coil type Galvanometers. Ballistic	

	Galvanometer and AC Vibration Galvanometer (only the basic	
	working Principle and Applications).	
2	Principles of Digital Instruments:	10
	Advantages of digital meters over analogue meters. Resolution &	
	sensitivity of digital meters. Working principles of digital Voltmeter,	
	Ammeter, Frequency meter, Phase Meter, Energy meter, Tachometer	
	and Multi-meter.	
3	Measurement of Resistance:	05
	Wheatstone's Bridge, Kelvin's Double Bridge and Megger.	
4	Measurement of Inductance & Capacitance:	05
	Maxwell's Inductance bridge, Maxwell's Inductance & Capacitance	
	Bridge, Hay's bridge, Anderson's Bridge, Desaugthy's Bridge, Schering	
	Bridge and Q meter	
5	Potentiometer:	04
	Basic potentiometer circuit, standardization, Crompton's Type	
	Potentiometer and its applications for calibration of Ammeter,	
	Voltmeter and Wattmeter and measurement of resistance and power.	
6	Transducers:	08
	Electrical Transducers, Active & Passive Transducers, Resistive	
	Transducer-Potentiometer, Resistance Pressure Transducer, Resistive	
	Position Transducer, Temperature Transducer- Resistance Thermometer,	
	Thermistor, Thermo couple, RTD, Inductive Transducer-Using Self	
	Inductance, Variable Reluctance type, Differential Output Transducers,	
	LVDT, RVDT, Capacitive Transducer-Capacitive Pressure Transducer	
	Piezo Electric Transducer, Photo Electric Transducer (Photo emissive,	
	Photo Conductive, Photo Voltaic)	

Books Recommended:

Text Books:

- 1. Electrical & Electronic Measurements and Instrumentation by AK Sawhney, Dhanpat Rai & Sons
- 2. Modern Electronic Instrumentation and Measurement Techniques by Helfric and Cooper, Prentice Hall of India
- 3. Electronic Instrumentation By H.S.Kalsi, Third Edition, Tata McGraw Hill

Reference Books:

- 1. Principle of Measurement & Instrumentation by Alan.S.Moris, Prentice Hall of India
- 2. Electrical Measurement & Instrumentation by RS Sirohi & Radhakrisnan, New Age International

Assessment:

Internal Assessment consists of two tests out of which; one should be compulsory class test (on minimum 02 Modules) and the other is either a class test or assignment on live problems or course project.

- 1. Question paper will comprise of 6 questions, each carrying 20 marks.
- 2. Total four questions need to be solved.
- 3: Q.1 will be compulsory, based on entire syllabus wherein sub questions of 2 to 5 marks will be asked.
- 4: Remaining question will be randomly selected from all the modules.

EEC305	Electrical Machines-I	20	20	20	80	3	-	100	

Course Objectives	 Students should understand the concepts of DC machines, Reluctance motor, Stepper motors and their applications. To impart industry oriented learning.
Course Outcomes	 Students will be able To analyze series parallel magnetic circuits to determine circuit parameters and losses. To illustrate principle of energy conversion in single and double excited machines. To understand the performance parameters of dc machines. To analyze the effect of performance parameters and application of dc motors. To analyze the performance of dc machines by conducting various test.
	 To illustrate the principle of operation and applications of stepper motors.

Module	Contents			
1	Basics of Magnetism	04		
刀	Magnetic field, Magnetic circuit, Numerical from series parallel magnetic circuit, Flux linkage, Inductance and energy, Faraday's laws,			
	Hysteresis and eddy current losses.			
2	Electromechanical Energy Conversion	08		
	Principle, Energy stored in magnetic field, Torque in singly excited			
	magnetic field, Reluctance motor, Doubly excited magnetic field,			
	Torque from energy and Co- energy. Dynamic equations			
3	DC Machines	10		
	Construction of machine, Basic design concept of lap and wave			
	winding, Principle of operation, Significance of commutator and			

	brushes, EMF and torque equation, concept of back EMF, Armature	
	reaction, Methods to minimize the effect of Armature reaction,	
	Process of commutation, Methods to improve commutation.	
4	DC Motor	14
	Characteristics of DC Motors, speed-torque characteristic equations	
	(Drives approach), Electrical braking (Rheostatic, regenerative and	
	plugging with numerical and speed-torque characteristic equation),	
	Necessity of starter, concept of soft starting, Block diagram of soft	
	starter, Speed control of DC shunt and series motor, losses and	
	efficiency, Applications of DC motor.	
5	Testing of DC Motor	06
	Retardation, Brake load, Swinburne, Hopkinson's and field test.	
6	Stepper Motor	06
	Working principle, construction of stepper motor, Classification,	
	Variable reluctance stepper motor (VRSM), Permanent magnet stepper	
	motor, Characteristics of stepper motor (Static and dynamic	
	characteristic) Applications of stepper motor. (No Numerical)

Course	 Students should be able to understand working principles of various analog and digital instruments & devices used for measurement of the
Objectives	various electrical parameters.
	 To understand the measurement of physical parameters using sensors.
	Students will be able
	 To illustrate the working principle of bridges
	 To do measurement of various electrical circuit parameters.
Course	 To calibrate various electrical measuring instruments.
Outcomes	To illustrate the concept of extension of range of meters used in electrical
	measurements.
	 To do the measurement of various process parameters.
	To illustrate the working principle of sensors

Syllabus: Same as that of Course EEC304 Electrical and Electronics Measurement

Suggested List of Laboratory Experiments:

- 1. Measurement of the medium resistance using Wheatstone Bridge.
- 2. Measurement of the low resistance using Kelvin's Double Bridge.
- 3. Measurement of inductance using Maxwell's Bridge.
- 4. Measurement of inductance using Hay's Bridge.
- 5. Measurement of inductance using Anderson's Bridge.
- 6. Measurement of capacitance using Desauty's bridge.

- 7. Measurement of capacitance using Schering's bridge.
- 8. Calibration of Crompton DC Potentiometer.
- 9. Calibration of Ammeter/Voltmeter/Wattmeter using Potentiometer.
- 10. To measure output voltage and displacement using LVDT and draw graph to verify the characteristics of output voltage Vs Displacement.
- 11. Measurement of temperature using RTD.
- 12. To Study various Thermocouples and Estimate their Response times.
- 13. Calibration of single phase energy meter by direct loading.
- 14. To measure output voltage and force using strain gauge and draw graph to verify the characteristics of force Vs Output voltage.

Any other experiment based on syllabus which will help students to understand topic/concept.

Term Work:

Term work shall consist of minimum 8 experiments. The distribution of marks for term work shall be as follows:

Experiments Performance :10 Marks Journal :10 Marks Attendance (Theory and Practical) :05 Marks

The final certification and acceptance of term work ensures the minimum passing in the term work.

Oral Examination:

Oral examination will be based on entire syllabus.

EEL302	Object Oriented Programming and Methodology Lab	-	-	-	0.	25	50	-	75

	 To learn the object oriented programming concepts 									
Course	• To study various java programming constructs like multithreading,									
Objectives	exception handling, packages etc.									
	 To explain components of GUI based programming. 									
	Students will be able									
	 To apply fundamental programming constructs. 									
Course	 To illustrate the concept of packages, classes and objects. 									
Course Outcomes	 To elaborate the concept of strings, arrays and vectors. 									
Outcomes	To implement the concept of inheritance and interfaces.									
	To implement the notion of exception handling and multithreading.									
	To develop GUI based application.									

• Prerequisite: Structured Programming Approach

Module	Content	Hours
1	OO Concepts: Object, Class, Encapsulation, Abstraction,	02
	Inheritance, Polymorphism.	
	Features of Java, JVM	
	Basic Constructs/Notions: Constants, variables and data types,	
	Operators and Expressions, Revision of Branching looping	
2	Classes, Object and Packages	05
	Class, Object, Method.	

	Constructor, Static members and methods	
	Passing and returning Objects	
	Method Overloading	
	Packages in java, creating user defined packages, access specifiers.	
3	Array, String and Vector	04
	Arrays, Strings, String Buffer	
	Wrapper classes, Vector	
4	Inheritance and Interface	03
	Types of Inheritance, super keyword, Method Overriding,	
	abstract class and abstract method, final keyword,	
	Implementing interfaces, extending interfaces	
5	Exception Handling and Multithreading	04
	Error vs Exception, try, catch, finally, throw, throws, creating	
	own exception	
	Thread lifecycle, Thread class methods, creating threads,	
	Synchronization	
6	GUI programming in JAVA	06
	Applet: Applet life cycle, Creating applets, Graphics class methods,	
	Font and Color class, parameter passing.	
	Event Handling: Event classes and event listener	
	Introduction to AWT: Working with windows, Using AWT	
	controls- push Buttons, Label, Text Fields, Text Area, Check	
	Box, and Radio Buttons.	

Suggested List of Programming Assignments / Laboratory Work:

- 1. Program on various ways to accept data through keyboard and unsigned right shift operator.
- 2. Program on branching, looping, labelled break and labelled continue.
- 3. Program to create class with members and methods, accept and display details for single object.
- 4. Program on constructor and constructor overloading
- 5. Program on method overloading
- 6. Program on passing object as argument and returning object
- 7. Program on creating user defined package
- 8. Program on 1D array
- 9. Program on 2D array
- 10. Program on String
- 11. Program on StringBuffer
- 12. Program on Vector
- 13. Program on single and multilevel inheritance (Use super keyword)
- 14. Program on abstract class
- 15. Program on interface demonstrating concept of multiple inheritance
- 16. Program on dynamic method dispatch using base class and interface reference.
- 17. Program to demonstrate try, catch, throw, throws and finally.
- 18. Program to demonstrate user defined exception

- 19. Program on multithreading
- 20. Program on concept of synchronization
- 21. Program on Applet to demonstrate Graphics, Font and Color class.
- 22. Program on passing parameters to applets
- 23. Program to create GUI application without event handling using AWT controls
- 24. Program to create GUI application with event handling using AWT controls
- 25. Mini Project based on content of the syllabus. (Group of 2-3 students)

Any other experiment based on syllabus which will help students to understand topic/concept.

Term Work:

Term work shall consist of minimum 16 experiments, assignments (min 2) and class test. The distribution of marks for term work shall be as follows:

Experiments Performance :10 marks
Assignments :05 marks
Class Test :05 marks
Attendance :05 marks

The final certification and acceptance of term work ensures the minimum passing in the term work.

Practical/Oral Examination:

Practical/Oral examination will be based on entire syllabus.

EEL303	Electronics Lab-I	-	-	-	-	25	25	-	50

Course Objectives	 To understand the basic concept of various electronic devices, circuits and their application. To develop ability among students to design and implement electronic circuits.
Course Outcomes	 To identify the different types of semiconductor devices and demonstrate their applications in electronic circuits. To determine the dc and ac parameters of semiconductor devices and differential amplifiers. To analyze the performance of different types of rectifier with and without filter. To plot frequency response of BJT and JFET amplifier. To analyze effect of feedback on the performance of amplifier. To analyze the performance of different type of oscillators

Syllabus: Same as that of Course EEC302 Electronic Devices and Circuits

Suggested List of Laboratory Experiments:

- 1. Study of V-I characteristics of standard PN junction diode, zener diode, schottkey diode.
- 2. Use of diode as clipper and clamper
- 3. Rectifier- Filter performance analysis
- 4. BJT biasing network stability analysis
- 5. BJT Input and Output Characteristics for CE/CB/CC configuration
- 6. Frequency response of BJT CE amplifier
- 7. Study of JFET characteristics and calculation of parameters
- 8. Study of MOSFET characteristics and calculation of parameters

- 9. Frequency response of JFET CS amplifier
- 10. Study of negative feedback on amplifier performance
- 11. Study of photo devices applications
- 12. Study of differential BJT amplifier
- 13. Study of Darlington pair amplifier
- 14. Study of a RC phase shift oscillator
- 15. Study of a Wien Bridge oscillator
- 16. Study of a Hartley/Colpitts oscillator

Any other experiment based on syllabus which will help students to understand topic/concept.

Term work:

Term work shall consist of minimum 10 experiments. The distribution of marks for term work shall be as follows:

Experiments performance :10 marks
Journal :10 marks
Attendance :05 marks

The final certification and acceptance of term work ensures the minimum passing in the term work.

Course	 To develop analytical insight of the student to prepare them for graduates studies in Electrical Engineering. To enhance their ability to solve and analyze Electrical Engineering
Objectives	 problem. To provide students with a strong mathematical foundation to acquire the professional competence knowledge and skills.
	Students will be able
Course Outcomes	 To develop the proactive approach towards the selection of methods to a solution of engineering problems. To identify different probability distribution, learn sampling technique,
Cuttomes	compute Eigen values and Eigen vectors and evaluate complex integrals and use their application in Electrical Engineering problems.

Pre-requisites:

Basics of Complex numbers, Analytic Function, Matrices, Symmetric, Orthogonal and Unitary matrices, Rank, Normal form, Solution of system of linear equations, L. I. & L. D. vectors, Basics of Probability.

1		Calculus of Variation:	06
	1.1	Euler's Langrange equation, solution of Euler's Langrange equation	
		(only results for different cases for Function) independent of a	
		variable, independent of another variable, independent of	
		differentiation of a variable and independent of both variables	
	1.2	Isoperimetric problems, several dependent variables	
	1.3	Functions involving higher order derivatives: Rayleigh-Ritz method	
		Linear Algebra: Vector Spaces	06
2	2.1	Vectors in n-dimensional vector space: properties, dot product, cross	
		product, norm and distance properties in n-dimensional vector space.	
	2.2	Vector spaces over real field, properties of vector spaces over real	
		field, subspaces.	

	2.3	The Cauchy-Schwarz inequality, Orthogonal Subspaces, Gram-	
		Schmidt process.	
3		Linear Algebra: Matrix Theory	10
	3.1	Characteristic equation, Eigen values and Eigen vectors, properties of Eigen values and Eigen vectors	
	3.2	Cayley-Hamilton theorem (without proof), examples based on verification of Cayley- Hamilton theorem.	
	3.3	Similarity of matrices, Diagonalisation of matrices.	4
	3.4	Functions of square matrix, derogatory and non-derogatory matrices.	
4		Probability	10
	4.1	Baye's Theorem (without proof)	
	4.2	Random variable: Probability distribution for discrete and continuous random variables, Density function and distribution function, expectation, variance.	
	4.3	Moments, Moment Generating Function.	
	4.4	Probability distribution: Binomial distribution, Poisson & normal distribution (For detailed study)	
5		Correlation	04
	5.1	Karl Pearson's coefficient of correlation, Covariance, Spearman's Rank correlation,	
	5.2	Lines of Regression.	
6		Complex integration	12
	6.1	Complex Integration: Line Integral, Cauchy's Integral theorem for simply connected regions, Cauchy's Integral formula.	
	6.2	Taylor's and Laurent's Series	
	6.3	Zeros, singularities, poles of f(z), residues, Cauchy's Residue theorem.	
	6.4	Applications of Residue theorem to evaluate real Integrals of different types.

Course Objectives	 To learn Basic structure of electrical power systems, different component of power system network. To get knowledge of mechanical and electrical design of transmission systems. 					
	 To learn representation of transmission systems for performance evaluation. 					
	Students will be able					
	To illustrate the general structure of power system.					
	• To illustrate purpose of different mechanical components of overhead					
	transmission lines.					
	• To determine transmission line parameters for different configurations.					
Course	• To analyze the performance of short, medium and Long transmission lines.					
Outcomes						
	• To analyze the performance of transmission line for different loading conditions.					
	To illustrate safety norms and regulations related to underground cables and grounding techniques.					

Module	Contents	Hours
1	Introduction:	02
	Basic structure of power system: generation, transmission and	
9.50	distribution, single line diagram of typical AC supply system,	
	comparison between AC and DC supply system, various system of	
	electric power transmission, choice of economic voltage for	
11/11/2	transmission, Transmission and Distribution network in India.	
2	Mechanical Design of Overhead lines:	07
	Main component of overhead lines, line supports, span, conductor	
	configuration, sag in overhead lines, calculation of sag for equal and	
	unequal supports, effect of ice and wind loading, insulators, type of	
	insulators, potential distribution across insulator string, string	

	efficiency, methods for improving string efficiency (*Numerical)	
3	Transmission Line Parameters:	12
	Resistance of transmission line, skin effect, proximity effect	
	Definition of inductance, Internal and external flux linkage of single	
	conductor, inductance of single phase two wire line, composite and	
	bundled conductor, inductance of three phase line with symmetrical	
	and unsymmetrical spacing, concept of GMR and GMD, necessity of	
	transposition, inductance of three phase double circuit line with	- 4
	symmetrical and unsymmetrical spacing, inductance of bundle	
	conductor	
	Capacitance of transmission line, capacitance of single phase line,	
	capacitance of three phase line with symmetrical and unsymmetrical	
	spacing, effect of earth on transmission line capacitance	
	(*Numerical)	
4	Representation of power system components:	03
	Introduction, single phase solution of balanced three phase networks,	
	One-Line diagram and Impedance or reactance diagram, Per	
	Unit(P.U.)system, advantage of Per Unit system ,p.u. impedance	
	diagram, representation of load (*Numerical)	
5	Performance of Transmission Line:	07
	Classification and modelling of short, medium and long lines,	
	regulation and efficiency of short and medium lines, Ferranti effect,	
	evaluation and estimation of generalized circuit constant(ABCD) for	
	short and medium lines, surge impedance loading, tuned power line,	
	Power circle diagram (*Numerical)	
6	Underground Cable and Power System Earthing:	05
	Underground Cable:	
	Classification and construction of cable ,insulation resistance of	
	cable, capacitance of single core and three core cable, grading of	
	cable, intersheath grading, capacitance grading	
	Power system Earthing:	
	Earthing definition, soil resistivity, step and touch potentials,	
	measurement of earth resistance, soil resistivity, neutral grounding	
	and its methods.	

Note: *Numerical should be covered in Tutorials.

Course Objectives	 To impart the knowledge of working principle, operations, performance and applications of single phase and three phase Transformers. To understand the design of transformer with its cooling system. To understand the performance parameters of transformers 							
Course Outcomes	 Students will be able To illustrate the working principle of single phase and three phase transformer To illustrate the working principle of auto-transformer To analyse various type of connections of three phase transformer. To analyse performance of transformer under various operating conditions To illustrate various design aspects of transformer. To analyse the characteristics of CT and VT. 							

Module	Contents	Hours
1	Single phase Transformer :- Review of EMF equation, Equivalent	10
	Circuit, Phasor diagram, voltage regulation, Losses and Efficiency.	
	Condition for Maximum Efficiency, All day Efficiency, Separation	
	of Hysteresis and Eddy current losses. Parallel Operation: No load	
100	Operation, On load Operation: - Equal Voltage Operation and	
	Unequal Voltage Operation, Testing of Transformer: - Polarity Test,	
	OC and SC test, Sumpner's Test, Impulse test	
2	Autotransformer:- Working, Advantages of Autotransformer over	04
	Two winding Transformer, Disadvantages. Introduction to High	
	Frequency Transformer, Pulse Transformer, Isolation Transformer	
	and its applications.	
3	Three Phase Transformers- Construction and parts of transformer	10
	(design approach), Three phase transformer connections and phasor	

	groups. Parallel operation, Excitation Phenomenon in transformers, Harmonics in three phase transformers, Suppression of harmonics, Oscillating neutral phenomenon, Switching in transient phenomenon, Open delta or V- connection, Three phase to two phase conversion (Scott connection).	
4	Introduction to machine design, Magnetic, Electrical, Conducting	12
	and Insulating materials used in machines.	
	Design of Single phase and Three phase transformers:- Output	4
	equation, Main Dimensions, Specific electric and magnetic loadings,	
	Design of core, Selection of the type of winding, Design of LV	
	and HV windings, Design of insulation.	
5	Performance measurement of Transformers Resistance and	08
	leakage reactance of the winding, Mechanical forces, No load current;	
	Cooling of transformers – design of cooling tank and tubes. Relevant	
	IS standards.

- 2. Ashfaq Husain, *Electric Machines*, Dhanpat Rai and co. publications
- 3. Vedam Subramanyam, Electrical Drive-concept and applications, TMH Publication
- 4. A. E. Fitzgerald, Kingsly, Stephen., *Electric Machinery*, Tata McGraw Hill

Assessment:

Internal Assessment consists of two tests out of which; one should be compulsory class test (on minimum 02 Modules) and the other is either a class test or assignment on live problems or course project

- 1. Question paper will comprise of 6 questions, each carrying 20 marks.
- 2. Total four questions need to be solved.
- 3: Q.1 will be compulsory, based on entire syllabus wherein sub questions of 2 to 5 marks will be asked.
- 4: Remaining question will be randomly selected from all the modules.

	Waves								

Course Objectives	 To impart the knowledge of electro-physics. Expose students Electric and magnetic field and their application in electrical engineering
Course Outcomes	 To apply knowledge of mathematics and physics in electrical engineering field. To analyse electrostatic and static magnetic fields. To analyse the effect of material medium on electric and magnetic fields. To analyse and formulate time varying electric and magnetic fields. To analyse wave generation and its propagation in different media. To analyse static magnetic field and electrostatic field distribution using software tool.

Module	Contents	Hours							
1	Vector Basics:	04							
	Concept of Scalar and Vector, Co-ordinate System: Rectangular,								
	Cylindrical and Spherical Co-ordinate System, Co-ordinate and vector								
	transformation, (Numerical on line, Surface and Volume Integrals)								
2	Static Electric Fields:	08							
	Coulomb's Law in Vector Form, Electric Field Intensity, Definition,								
3	Principle of Superposition, Electric Field due to point charges, Electric								
	Field due to line charge (one and two conductor transmission lines),								
	Electric Field due to an infinite uniformly charged sheet, Definition and								
	physical interpretation of gradient, Electric scalar potential, Relationship								

	between potential and electric field and its application on Surface voltage gradient on conductor, Potential due to electrical dipole and flux lines, Electric Flux Density, Gauss Law, Definition and physical Significance of Divergence, Divergence theorem	
3	Static Magnetic Fields: The Biot-Savart's Law in vector form, Magnetic Field intensity due to a finite and infinite wire carrying a current I, Magnetic field intensity on the axis of a circular loop carrying a current I, Ampere's circuital law and its application on A solid cylindrical conductor and Infinitely long co-axial transmission line, Magnetic flux density, Definition and physical Interpretation of Curl, The Lorentz force equation for a moving charge and its applications on Force on a wire carrying a current I placed in a magnetic field, Torque on a loop carrying a current I, Magnetic moment,	08
	Magnetic Vector Potential.	
4	Electric and Magnetic Fields in Materials: Poisson's and Laplace's equation and its application on Estimation and control of electric stress, control of stress at an electrode edge, Electric Polarization, Definition of Capacitance, Capacitance of two parallel plate, Co-axial, Spherical and Capacitance of two conductor of a single phase line, Electrostatic energy and energy density, Boundary conditions for electric and magnetic field, Electric current, Current density, Point form of ohm's law, Continuity equation for current, Definition of Inductance, Inductance of loops and solenoids, Flux linkage within and outside the conductor producing the flux, Energy density in magnetic fields.	08
5	Time varying Electric and Magnetic Fields: Faraday's law, Maxwell's Second Equation in integral form from Faraday's Law, Equation expressed in point form, Displacement current, Ampere's circuital law in integral form, Modified form of Ampere's circuital law as Maxwell's first equation in integral form, Equation expressed in point form, Maxwell's four equations in integral form and differential form.	04
6	Wave theory: Derivation of Wave Equation, Uniform Plane Waves, Maxwell's equation in phasor form, Wave equation in phasor form, Plane waves in free space and in a homogenous material, Wave equation for a conducting medium, Plane waves in lossy dielectrics, Propagation in good conductors, Skin effect.	04

Assessment:

Internal Assessment consists of two tests out of which; one should be compulsory class test (on minimum 02 Modules) and the other is either a class test or assignment on live problems or course project.

Term work:

Term work consists of minimum eight tutorials (at least one on each module) and assignments (min. 2). The distribution of the term work shall be as follows:

Tutorials :15 marks
Assignments :05 marks
Attendance (Theory and Tutorial) :05 marks

The final certification and acceptance of term-work ensures the minimum passing in the term-work.

- 1. Question paper will comprise of 6 questions, each carrying 20 marks.
- 2. Total four questions need to be solved.
- 3: Q.1 will be compulsory, based on entire syllabus wherein sub questions of 2 to 5 marks will be asked
- 4: Remaining question will be randomly selected from all the modules.

	• To introduce the basic building blocks, theory and applications of linear
Course	integrated circuits.
Objectives	 To develop ability among students for problem formulation, system
Objectives	design and solving skills
	Students will be able
	• To illustrate various performance parameters and characteristics of
	operational amplifier.
	• To illustrate various linear and non-linear application of operational
Course	amplifiers.
Outcomes	 To design and analyse linear voltage regulators and multivibrators.
	• To do various conversion of number systems and illustrate logic
	families.
	To build, design and analyse combinational circuits.
	 To build, design and analyse sequential circuits.

Module	Contents	Hours
1	Operational Amplifiers: Fundamentals	03
	Introduction to Differential amplifier, Block diagram of Op-amp	
	Basics of an Op-amp, Op-amp parameters, Frequency response	
2	Application of Operational Amplifiers	08
1	Voltage follower, design of inverting and non- inverting amp, adder,	
	subtractor, integrator and differentiator, V to I and I to V converter,	
	Schmitt trigger, sample and hold circuits, active filters: first order	
	LPF, Instrumentation amplifier (3 Op-amp) with applications,	
	Optical isolation amplifier	

2	I in on Voltage Decorletons	06
3	Linear Voltage Regulators –	06
	IC -78xx, 79xx, LM 317. Design of adjustable voltage source using	
	IC- LM317, Low Dropout (LDO) voltage regulator	
	IC-555-	
	Functional block diagram, Applications of IC 555, Design of	
	Multivibrator (Monostable and Astable)	
4	Logic families -	06
	Review of Number formats: Binary, hexadecimal, BCD and their	
	basic math operations (addition and subtraction) Introduction to	
	Logic gates and Boolean Algebra. Specifications of Digital IC,	
	Logic Families: TTL,CMOS logic families, Comparison of TTL and	
	CMOS, Interfacing of TTL and CMOS	
5	Combinational Logic Circuit -	08
	K-Maps and their use in specifying Boolean expressions upto 4	
	variables, Minterm, Maxterm, SOP and POS implementation	
	Implementing logic function using universal gates, Binary	
	Arithmetic circuits: Adders, Subtractors (Half and Full), Multiplier,	
	2 bit comparators, Designing code converter circuit - binary to	
	gray, Gray to Binary, Multiplexer (ULM), De-multiplexers.	
6	Sequential Logic Circuits -	05
0	Comparison of combinational & sequential circuit	0.5
	Flip-flops -	
	SR, T, D, JK, Master Slave JK, Converting one flip-flop to another,	
	Use of debounce switch	
	Counters-	
	Modulus of counter, Design of Synchronous, Asynchronous	
	counters, Ripple counters, Up/Down Counter, Ring counter,	
	Shift Registers – Right and left shift registers

					Exam	(Hrs)			
EEC406	Electrical Network	20	20	20	80	3	25	125	

Course Objectives	 To impart the knowledge of various fundamental techniques for analysis of electrical network from application point of view. To mold creative engineers needed in education and industrial development along with problem solving skills.
Course Outcomes	 Students are able To analyze electrical network using different Network theorems. To analyze electrical network using Graph theory. To analyze the effect of switching conditions on Electrical networks using Differential equations. To analyze the effect of switching conditions on Electrical networks using Laplace Transform. To develop transfer function model of system using two port network parameters. To analyze time domain behavior from pole zero plot

Module	Contents	Hours
1	Solution of Network:	10
78	with DC Dependent Sources:	
4	Mesh analysis, Super mesh analysis, Nodal analysis, Super node	
	analysis, Source transformation and Source shifting. Superposition	
	theorem, Thevenin's theorems and Norton's theorem and Maximum	
	power transfer theorem.	
	with AC Sources:	
7	Magnetic coupling, Mesh analysis, Nodal analysis, Superposition	
	theorem, Thevenin's theorems, Norton's theorem, Maximum power	
	transfer theorem and Reciprocity theorem	
2	Graph Theory and Network Topology:	05
	Introduction, Graph of network, Tree, Co-tree, Loop incidence matrix,	

	Cut set matrix, Tie set matrix and Loop current matrix, Number of possible tree of a graph, Analysis of network equilibrium equation and Principle of duality.	
3	First Order and Second Order Differential Equations:	05
	Behaviors of network elements under switching condition and their	
	representation, Solution of initial and final condition in RL, RC and	
	RLC networks for AC and DC sources.	
4	The Laplace Transform:	05
	The Laplace transform and its application to network analysis,	
	transient and steady state response to step, ramp and impulse signals.	
5	Two port parameters:	05
	Open circuit, short circuit, transmission and hybrid Parameters,	
	relationships between parameter sets, reciprocity and symmetry	
	conditions, parallel connection of two port networks	
6	Network Functions; Poles and Zeros:	06
	Network functions for one port and two port networks, Driving point	
	and transfer functions, ladder network, General network, poles and	
	zeros of network functions, restrictions on Pole and zero locations for	
	driving point functions and Transfer functions, time domain behavior	
	from pole - zero plot.	

Note: Numerical should be covered in Tutorials.

Course Objectives	 To understand basic block sets of different simulation platform used in electrical system design. To understand coding in different programming software's used in electrical
	system design
	Students are able
Course	To simulates electrical circuits for their performance analysis.
	To develop algorithms for electrical circuits for their performance analysis.
Outcomes	To simulates electronic circuits for their performance analysis.
	• To develop algorithms for electronic circuits for their performance analysis.

Suggested List of Laboratory Experiment:

- 1. Introduction to basic block sets of simulation platform.
- 2. Simulation of single phase bridge rectifier without filter
- 3. Simulation of single phase bridge rectifier with filter
- 4. Simulation of UJT as a relaxation oscillator
- 5. Algorithm on matrix operations
- 6. Simulation for OC and SC test of single phase transformer
- 7. Simulation of transmission line model
- 8. Algorithms to determine transmission line performance and parameters
- 9. Algorithm for generation of standard test signals
- 10. Simulation of differential equations
- 11. Simulation to verify different network theorems with dependent and independent sources
- 12. Simulation of DC motor performance characteristics
- 13. Simulation / Algorithms to draw the pole zero plot of electrical network
- 14. Simulation / Algorithms to draw the response of electrical network for standard test signals.

Any other simulations / algorithms based on third and fourth semester syllabus, which will help students to understand topic / concept.

Term work:

Term work consists of minimum 8 simulation / algorithms (at least one on each domain). The distribution of the term work shall be as follows:

Simulation / Algorithm :20 marks Attendance :05 marks

The final certification and acceptance of term-work ensures the minimum passing in the term-work.

Practical/Oral Examination:

Practical/Oral examination will be based on entire syllabus.

Course Objectives	 To impart the knowledge of working principle, operations, performance and applications of single phase and three phase Transformers. To understand the performance parameters of transformers
	Students will be able
	To demonstrate the working principle of single phase and three phase
	transformer
Course	 To demonstrate the working principle of auto-transformer
Outcomes	 To analyse various type of connections of three phase transformer.
o accomes	To analyse performance of transformer under various operating
	conditions
	 To analyse the characteristics of CT and VT.

Syllabus: Same as that of Course EEC403 Electrical Machine - II

Suggested List of Laboratory Experiment:

- 1. O.C & S.C. Test on 1Φ Transformer
- 2. Sumpner's Test on 1Φ Transformer
- 3. Separation of iron loss into hysteresis and eddy current loss components in $a1\Phi$ Transformer
- 4. Load Test on 1Φ Transformer
- 5. Open circuit & Short circuit test on three phase transformer
- 6. Parallel operation of transformers
- 7. Scott connection of transformer
- 8. Open Delta connection of transformer

Any other experiment based on syllabus which will help students to understand topic/concept.

Term work:

Term work shall consist of minimum 6 experiments. The distribution of marks shall be as follows:

Experiments Performance :10 marks Journal :10 marks Attendance (Theory and Practical) :05 marks

The final certification and acceptance of term work ensures the minimum passing in the term work.

Practical/Oral Examination:

Practical/Oral examination will be based on entire syllabus.

Course Outcomes	 Students will be able To demonstrate various performance parameters and characteristics of operational amplifier. To demonstrate various linear and non-linear application of operational amplifiers. To build, design, and analyse linear voltage regulators and multi vibrators To build, design and analyse combinational circuits. To build, design and analyse sequential circuits.

Syllabus: Same as that of Course EEC405 Analog and Digital Integrated Circuits.

Suggested List of Laboratory Experiments:

- 1. Linear applications of op-amp
- 2. Non linear applications of op-amp
- 3. Active filters
- 4. Design and implementation of variable voltage regulator using IC 317
- 5. Design and implementation of a stable multivibrator
- 6. Design and implementation of monostable multivibrator
- 7. Design and implementation of VCO.
- 8. Implementing a Binary to Gray, gray to binary or Binary to XS3 code converter using gate ICs.
- 9. Constructing flip-flops like SR, D, JK and T using all NAND gates and a debounce

switch.

- 10. Designing a mod N counter where N <14 using J K flip-flops and D flip-flops.
- 11. Design of a ripple counter
- 12. Design two bit comparator using gate ICs.
- 13. Building of a ring counter and twisted ring counter using D flip-flop ICs.
- 14. Any one of the following
 - (i) Full Adder using Gates and using Decoder or a Multiplexer.
 - (ii) Using a shift register as a sequence generator.

Any other experiment based on syllabus which will help students to understand topic/concept.

Term work:

Term work shall consist of minimum 10 experiments. The distribution of marks for term work shall be as follows:

Experiments Performance :10 marks Journal :10 marks Attendance (Theory and Practical) :05 marks

The final certification and acceptance of term work ensures the minimum passing in the term work.

Practical/Oral Examination:

Practical/Oral examination will be based on entire syllabus.

Course Objectives	 To introduce the basic laboratory instruments used for measurement purpose. To develop the ability to handle electrical equipment. 							
Course Outcomes	 Students will be able To demonstrate various electrical and electronic measuring equipment's. To identify various electrical and power electronic components. To repair and do maintenance of households appliances. To identify and use different low voltage protective switchgears. To identify and use different wiring accessories and tools. 							

Syllabus:-

Module	Contents	Hours
1	Introduction of lab equipment's and electrical elements:	03
	Introduction to different equipment in the lab (multi-meter, CRO,	
	DSO, power supplies, function generators);	
	Resistors, presets, potentiometers, inductors (iron core and ferrite	
	core), capacitors of different ratings.	
	Electromagnetic Relays, MOVs,	
2	Introduction to different electronic components:	03
	different ratings, packages, terminals, sizes and shapes, testing	
	methods of diodes (rectifier, ultrafast, schotkey, power, zener, LED),	
	transistors(BJT), SCRs, GTOs, MOSFETs, IGBTs, DIACs, TRIACs,	
	intelligent power modules (IPM) (Minimum Three)	
	Different PCB connectors, Terminal, Terminal Blocks;	
	Transformers used for electronic circuits (pulse, high frequency)	

3	Commonly used ICs:	04
	Data sheet reading of commonly used ICs (buffers,opto-couplers, gate	
	drivers, PWM ICs, Real time clock ICs, PLL ICs, seven segment	
	display and driver) (Minimum Three)	
4	Hardware implementation of Electronics circuits:	06
	Soldering techniques and equipments, PCB Layout (artwork) design	
	using software and Fabrication itching process. Testing and debugging	
	process of assembled circuits	
5	Residential/ Industrial Wiring:	04
	Wiring materials, selection of wire, different switching and protection	
	devices (MCBs/ Fuses/Relays), Cables and cable management	
	Estimation and costing of residential wiring (Simple numerical on	
	wiring of single room), connection of energy meter and distribution	
	board, wiring standards (IS-732, section 4)	
6	Repair of house hold appliances and machines:	04
	Testing, fault finding, Dismantling, assembling and testing after repairs	
	of house hold appliances like fan and regulator, heater, geyser, mixer,	
	washing machine, microwave oven etc.(minimum Two)	
	Troubleshooting charts for 1 ph and 3ph transformers and motors	
	(Minimum one transformer and one motor)

- 3. Allasappan & Ekambarm Estimating design & costing
- 4. S L Uppal Estimating & costing
- 5. Surjit Singh Electrical Estimating & costing
- 6. K B. Bhatia: Electrical Appliances

Suggested List of Laboratory Experiments:

- 1. Study of different symbols and tools used in Electrical Engineering
- 2. Identify values of different resistors and capacitor using color code and DMM
- 3. Identify different types of cables/wires, switches and their uses.
- 4. Identify different types of fuses & fuse carriers, MCB and ELCB, MCCB with ratings and usage.
- 5. Wiring of simple light circuit for controlling light/fan point (PVC conduit wiring and wiring accessories)
- 6. Wiring of fluorescent lamps and light sockets (6 A).
- 7. Wiring of Power circuit for controlling power device (16A socket)
- 8. Design of Staircase wiring / Go-down wiring / Tunnel wiring

- 9. Demonstration and measurement of power/energy consumption and repair maintenance of electric iron/mixer grinder/ washing machine/refrigerator/ air conditioner/water heater/geyser/single phase pump/exhaust fan.
- 10. Verifying the fusing time of rewireable fuses.
- 11. To identify terminology of various semiconductor devices.

Any other experiment based on syllabus which will help students to understand topic/concept.

Term Work:

Term work shall consist of minimum 8 experiments. The distribution of marks for term work shall be as follows:

Laboratory Performance : 10 marks Journal : 10 marks Attendance : 05 marks

The final certification and acceptance of term work ensures the minimum passing in the term work.

Oral Examination:

Oral examination will be based on entire syllabus.
