# **UNIVERSITY OF MUMBAI**

Revised syllabus (Rev- 2016) from Academic Year 2016 -17 Under

## FACULTY OF TECHNOLOGY

## **Production Engineering**

Second Year with Effect from AY 2017-18 Third Year with Effect from AY 2018-19 Final Year with Effect from AY 2019-20

As per **Choice Based Credit and Grading System** with effect from the AY 2016-17

#### **Co-ordinator, Faculty of Technology's Preamble:**

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

Faculty of Technology, University of Mumbai, in one of its meeting unanimously resolved that, each Board of Studies shall prepare some Program Educational Objectives (PEOs) and give freedom to affiliated Institutes to add few (PEOs). It is also resolved that course objectives and course outcomes are to be clearly defined for each course, so that all faculty members in affiliated institutes understand the depth and approach of course to be taught, which will enhance learner's learning process. It was also resolved that, maximum senior faculty from colleges and experts from industry to be involved while revising the curriculum. I am happy to state that, each Board of studies has adhered to the resolutions passed by Faculty of Technology, and developed curriculum accordingly. In addition to outcome based education, semester based credit and grading system is also introduced to ensure quality of engineering education.

Choice based Credit and Grading system enables a much-required shift in focus from teacher-centric to learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. University of Mumbai has taken a lead in implementing the system through its affiliated Institutes and Faculty of Technology has devised a transparent credit assignment policy and adopted ten points scale to grade learner's performance. Credit assignment for courses is based on 15 weeks teaching learning process, however content of courses is to be taught in 12-13 weeks and remaining 2-3 weeks to be utilized for revision, guest lectures, coverage of content beyond syllabus etc.

Choice based Credit and grading system is implemented from the academic year 2016-17 through optional courses at department and institute level

Dr. S. K. Ukarande Co-ordinator, Faculty of Technology, Member - Academic Council University of Mumbai, Mumbai

#### **Chairman's Preamble:**

Engineering education in India is expanding and is set to increase manifold. The major challenge in the current scenario is to ensure quality to the stakeholders along with expansion. To meet this challenge, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education and reflects the fact that in achieving recognition, the institution or program of study is committed and open to external review to meet certain minimum specified standards. The major emphasis of this accreditation process is to measure the outcomes of the program that is being accredited. Program outcomes are essentially a range of skills and knowledge that a student will have at the time of graduation from the program. In line with this Faculty of Technology of University of Mumbai has taken a lead in incorporating the philosophy of outcome based education in the process of curriculum development.

As the Chairman, Board of Studies in Mechanical Engineering of the University of Mumbai, I am happy to state here that, the Program Educational Objectives of the Undergraduate Program in Production Engineering, which comes under the same board, were finalized during the multiple brain storming sessions, which was attended by more than 25 members from different affiliated Institutes of the University. They are either Heads of Departments or their senior representatives from the Department of Production Engineering. The Program Educational Objectives finalized for the undergraduate program in Production Engineering are listed below;

- 1. To prepare the Learner with a sound foundation in the mathematical, scientific and engineering fundamentals related to Manufacturing and its strategies.
- 2. To motivate the Learner in the art of self-learning and to use modern tools for solving real life problems.
- 3. To inculcate a professional and ethical attitude, good leadership qualities and commitment to social responsibilities in the Learner's thought process.
- 4. To prepare the learner to face industrial challenges through practical exposure in an industrial environment.
- 5. To prepare the Learner for a successful career in Indian and Multinational Organizations.

In addition to Program Educational Objectives, for each course of the program, objectives and expected outcomes from a learner's point of view are also included in the curriculum to support the philosophy of outcome based education. I strongly believe that even a small step taken in the right direction will definitely help in providing quality education to the major stakeholders.

#### Dr. S. M. Khot

#### Chairman, Board of Studies in Mechanical Engineering, University of Mumbai

University of Mumbai, B. E. (Production Engineering), Rev 2016

## T.E. (Production) Sem.-VI

| Course Code   | Course Name                           | Credits |
|---------------|---------------------------------------|---------|
| <b>PEC501</b> | Design of Mould & Metal Forming Tools | 04      |

- 1. To prepare the students study and analyze casting and forming processes like forging, rolling, extrusion and drawing of ferrous and non-ferrous metals.
- 2. To familiarize the students with the design of sand molds, die casting dies, roll grooves and multi impression forging die etc.

- 1. Demonstrate the concepts of metal casting and metal forming processes.
- 2. Identify the equipment, machinery and tooling used for sand casting/die casting.
- 3. Identify equipment, machinery and tooling used for forming processes (such as forging rolling and extrusion).
- 4. Illustrate the basic theory pertaining to plastic deformation of metal.
- 5. Develop skills in designing tools, the set up for the processing techniques pertaining to various metal casting and metal forming operations.
- 6. Analyze various defects, their probable causes and remedial measures confronted with metal casting and forming processes.

| Module | Contents  | Hrs. |
|--------|---|------|
| 01     | <ul> <li>Design of Sand moulds:</li> <li>1.1Design and drawing of gating system: Pouring basin, Sprue, Runners and Ingates.</li> <li>1.2 Design of feeding system: Caine's method, Modulus method, Chvorinov's mould constant, Use of chills, padding and risering.</li> </ul>  | 10   |
| 02     | <ul><li>2.1 Melting &amp; Pouring: Melting practices: Cupola, Arc and Induction furnaces.</li><li>2.2 Defects in cast components and their remedies.</li></ul>  | 02   |

#### **Internal Assessment for 20 marks:**

#### Consisting Two Compulsory Class Tests

First test based on approximately 40% of contents and second test based on remaining contents (approximately 40% but excluding contents covered in Test I)

#### **End Semester Examination:**

Weightage of each module in end semester examination will be proportional to number of respective lecture hours mentioned in the curriculum.

- 1. Question paper will comprise of total six questions, each carrying 20 marks
- 2. Question 1 will be compulsory and should cover maximum contents of the curriculum
- **3. Remaining questions will be mixed in nature** (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four questions need to be solved

## **Reference Books:**

- 1. Metal Casting: A Sand Casting Manual for the Small Foundry-Vol. 2, Stephen D. Chastain.
- 2. Principles of Metal Casting, R W Heine, C R Loper, P. C. Rosenthal.
- 3. Metal Casting, T.V. Ramana Rao.
- 4. Manufacturing Technology, P.N. Rao.
- 5. Foundry Engineering, P.L.Jain.
- 6. Die Casting, H.H. Doehler
- 7. The Diecasting Handbook, A.C.Street, Portcullis Press, Redhill, U.K.
- 8. Mechanical Metallurgy, George E. Dieter.
- 9. Metals Hand Book–Vol. 14 Forming and Forging, ASM International.

10. Forging Die Design, Sharan, Prasad and Saxena.

11. Forging Handbook-Forging Methods, A. Thomas, Publisher-Drop Forging Research Association, Shepherd Street, Sheffield.

| Course Code   | Course Name                | Credits |
|---------------|----------------------------|---------|
| <b>PEC502</b> | <b>Operations Research</b> | 03      |

- 1. To familiarize the students with various tools of optimization for management of various resources.
- 2. To acquaint the students with various simulation tools for optimization for various resources.

- 1. Utilize the resources in various industries optimally.
- 2. Apply the concept of linear programming for solving specialized problems on transportation, assignments & sequencing.
- 3. Apply principles of queuing, replacement & game theory models to solve real life problems.
- 4. Demonstrate the concept of dynamic programming in modelling and solving problems.
- 5. Illustrate different types of simulation models applicable to Inventory/queuing.
- 6. Acquire skills in identifying & applying cost effective strategies in managing of manufacturing projects.

|   | Module | Contents   | Hrs. |
|---|--------|--|------|
|   | 01     | <ul> <li>1.1 Linear Programming: Linear Programming Problem: Formulation,<br/>Graphical solution, Simplex method, Big-M method, Two-phase method,<br/>Principle of Duality, Dual Simplex, Sensitivity Analysis.</li> <li>1.2 Transportation problem: Formulation - Optimal solution, Degeneracy.</li> <li>1.3 Assignment problem: Formulation - Optimal solution, Traveling Salesman<br/>problem.</li> <li>1.4 Sequencing: Introduction - Flow Shop sequence. Sequencing - n jobs through<br/>two machines - n jobs through three machines - Job shop sequencing - two jobs<br/>through 'm' machines.</li> </ul> | 15   |
|   | 02     | <ul> <li>2.1 Queuing Models: Introduction - Single Channel - Poisson arrivals - exponential service times - with infinite population and finite population models – Multichannel - Poisson arrivals – exponential service times with infinite population single channel Poisson arrivals.</li> <li>2.2 Replacement: Introduction - Replacement of items that deteriorate with time - when money value is not counted and counted -Replacement of items that fail completely, group replacement</li> </ul>  | 06   |
|   | 03     | <b>Game Theory</b> : Introduction - Minimax (Maximin) - Criterion and optimal strategy<br>- Solution of games with saddle points – Rectangular games without saddle points<br>- 2 X 2 games - dominance principle – m X2 & 2 X n games, Graphical method   | 05   |
| - | 04     | <b>Dynamic programming</b> : Introduction – Bellman's Principle of optimality -<br>Applications of dynamic programming- capital budgeting problem - Shortest Path<br>problem – Minimum Spanning Tree.  | 04   |
| 1 | 05     | <b>Simulation</b> : Definition - Types of simulation models - phases of simulation - applications of simulation - Inventory and Queuing problems - Advantages and Disadvantages - Simulation Languages.  | 04   |
|   | 06     | <b>Project Management:</b> Programme Evaluation and Review Technique, Critical Path Method, Network Updating, Crashing of Network and Resources levelling.   | 08   |

| Course Code   | Course Name        | Credits |
|---------------|--------------------|---------|
| <b>PEC503</b> | Machine Design – I | 04      |

- 1. To prepare the students learn basic principles of engineering design.
- 2. To familiarise the students with the concepts of strength design related to various components.
- 3. To acquaint the students use design data books & various codes of practices.

- 1. Apply basic principles of machine design.
- 2. Design joints such as knuckle joint/turn buckle.
- 3. Design machine elements such keys, shafts, couplings/springs.
- 4. Design pressure vessels.
- 5. Design weld joint.
- 6. Design rivet/bolt joints.

| Module | Contents   | Hrs. |
|--------|--|------|
| 01     | <ul> <li>1.1. Introduction - Steps involved in designing, types of designs, considerations in designing, Design-manufacturing interface, material selection, factor of safety and its implications.</li> <li>1.2. Operational Joints - Introduction to cottered, pinned &amp; threaded joints, &amp; their applications.</li> <li>1.3. Design of socket &amp; spigot type</li> <li>1.4. Design of Pinned Joints - Knuckle joint</li> <li>1.5. Design of Turn Buckle</li> </ul>   | 10   |
| 02     | <ul> <li>2.1 Determination of stresses in machine components with various cross sections. Circular, rectangular, triangular, trapezoidal, T &amp; I sections subjected to direct &amp; bending stresses. (Including stresses at critical sections)</li> <li>2.1. Stresses in curved members- Design of crane hooks &amp; C-clamps with various cross sections (Circular, triangular, square, rectangular, trapezoidal) (Circular &amp; oval rings to be excluded).</li> </ul>  | 06   |
| 03     | <ul> <li>3.1. Design of shafts <ul> <li>3.1.1. Design of shafts on the basis of strength. Shafts subjected tobending alone, Torsion alone, combined action of torsion &amp; bending, combined action of torsion &amp; axial loads, combined action of torsion, bending &amp; axial loads (Rankine's and Guest's equations)</li> <li>3.1.2. Concepts about design of shafts based on rigidity (lateral &amp; torsional rigidity)- only Implications</li> </ul> </li> <li>3.2. Design of keys <ul> <li>3.2.1. Different types of keys and applications.</li> <li>3.2.2. Fitting of keys – types and effects of keyway on shaft</li> <li>3.2.3. Stresses in keys and design of key dimensions.</li> </ul> </li> <li>3.3. Design of couplings: <ul> <li>3.3.1 Classification of couplings &amp; application areas</li> </ul> </li> </ul> | 10   |

|    | 3.3.2. Design of flanged couplings, muff couplings, bushed pin type                  |     |
|----|--|-----|
|    | flexible coupling.   |     |
|    | 4.1. <b>Design of welded joints</b> - Types & classification of welded joints,       |     |
|    | applications. Familiarization of AWS code. Strength of welded joints-                | 0.6 |
| 04 | Transverse & parallel fillet welds. Welded joints subjected to torsion               | 06  |
|    | – circular fillet welds and adjacent fillet welds.                                   |     |
|    | 4.2. Design of welded joints subjected to eccentric loading.                         |     |
|    | 5.1. <b>Design of bolted joints</b> - stresses in bolts, joints for leak proof fluid |     |
|    | tight applications (like cylinder to cylinder cover fastening in an IC               |     |
|    | engine), bolts of uniform strength.  |     |
| 05 | 5.2. <b>Design of riveted joints-</b> Type of rivets and riveted joints Failure      | 10  |
| 00 | modes of riveted joints & efficiency of riveted joints Design of                     | 10  |
|    | riveted joints for riveting longitudinal & circumferential seams of                  |     |
|    | pressure vessels. Familiarization of Indian Boiler Degulation (IBP)                  |     |
|    | 5.2 Design of bolted and riveted joints subjected to accentric loading               |     |
|    | 5.5. Design of boned and rivered joints subjected to eccentric toading.              |     |
|    | 6.1. Design of Springs: Classification and applications, design of helical           |     |
|    | compression and tension springs (only circular cross-section),                       |     |
|    | co-axial springs. Design of leaf springs-straight and semi elliptical                |     |
| 06 | laminated leaf springs. Strain energy of springs-design of buffer                    | 06  |
| VO | springs.   | 00  |
|    | 6.2. <b>Design of Pressure Vessels</b> : Design concepts of thick and compound       |     |
|    | cylinders, Stresses in thick & compound cylinders. Determination of                  |     |
|    | wall thickness, hoop and radial stresses, nature of hoop and radial                  |     |
|    | stress distribution on cylinder walls.   |     |
|    | stress distribution on cymider wans.   |     |

#### Internal Assessment for 20 marks:

## Consisting Two Compulsory Class Tests

First test based on approximately 40% of contents and second test based on remaining contents (approximately 40% but excluding contents covered in Test I)

### **End** Semester Examination:

Weightage of each module in end semester examination will be proportional to number of respective lecture hours mentioned in the curriculum.

- 1. Question paper will comprise of total six questions, each carrying 20 marks
- 2. Question 1 will be compulsory and should cover maximum contents of the curriculum
- 3. **Remaining questions will be mixed in nature** (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four questions need to be solved

## NOTE:

Use of standard design data books like PSG Data Book or Design Data by Mahadevan is permitted at the examination and shall be supplied by the college.

## **Reference Books:**

- 1. Design of machine elements -- V. B. Bhandari. Tara Mc-Graw Hill Pub.
- 2. Design of machine elements -- Sharma, Purohit. Prentice Hall India Pub.
- 3. Machine Design An Integrated Approach -- Robert L. Norton PearsonEducation.

Nom

- 4. Machine Design Pandya & Shah- Charotar PI/blishing.
- 5. Mechanical Engineering Design J. E. Shigley McGraw Hill
- 6. Recommended Data Books PSG, K. Mahadevan
- 7. Machine Design Reshetov Mir Publication
- 8. Machine Design Black Adams-Mcgraw Hill
- 9. Fundamentals of Machine Elements Hawrock, Jacobson Mcgraw Hill
- 10. Design of Machine Elements V.M. Faires
- 11. Design of Machine Elements Spotts.

tions

- 1. To familiarize the concepts of computer aided engineering for design & manufacturing.
- 2. To impart the knowledge on computer graphics used in engineering.
- 3. To familiarize the students with the concepts of computer aided manufacturing and its significance.
- 4. To familiarize the students with interfacing of drive systems with the machines.

- **1.** Use computer graphics in design.
- 2. Identify proper modeling techniques for geometric modeling.
- 3. Develop expertise in computer-aided manufacturing.
- 4. Illustrate basic concepts of control systems.
- 5. Write the appropriate code for performing particular tasks in a CNC
- 6. Solve real life engineering problems using FEA.

|-------------|-----------------------|---------|
| PEC505      | METROLOGY AND QUALITY | 04      |
|             | ENGINEERING           |         |

- 1. To acquaint with principles of precision measuring instruments & their significance.
- 2. To familiarize with the handling & use of precision measuring instruments/ equipment's,
- 3. To acquaint with key features and the basics of Total Quality Management philosophy.
- 4. To familiarize with various quality tools and their uses in solving problems.

- 1. Handle & operate precision measuring instruments / equipment's.
- 2. Design Go and No Go gauges for a given assembly.
- 3. Analyze simple machined components for dimensional stability & functionality.
- 4. Identify and use proper quality tools in various manufacturing /service problems.
- 5. Integrate quality approaches for productivity improvement.
- 6. Comprehend and apply Quality standards in different situations.

| Module | Contents  | Hrs |
|--------|---|-----|
| 01     | <ol> <li>Introduction to Metrology</li> <li>1.1 Need for inspection, fundamental principles and definition, standards of measurement, Static characteristics of Measurements.</li> <li>1.2 Limits, fits and Tolerances of interchangeable manufacture, Elements of Interchangeable System, hole based and shaft based systems IS 919 : 1963 tolerance grades, types of fits, General requirements of go &amp; NO GO gauging, Taylor's principle, Design of go &amp; no go gauges.</li> </ol>  | 08  |
| 02     | <ul> <li>2.1 Comparators: Constructional features and operation of mechanical, optical, electrical/electronic and pneumatic comparators, advantages, limitations and field of Applications.</li> <li>2.2 Principles of interference, concept of flatness, flatness testing, optical flats, optical Interferometer and laser interferometer.</li> <li>2.3 Surface texture measurement: importance of surface conditions, roughness and waviness, surface roughness standards specifying surface roughness parameters- Ra, Ry, Rz, RMS value etc., surface roughness measuring instruments – Tomlinson and Taylor Hobson versions, surface roughness symbols</li> </ul> | 09  |
| 0.3    | <ul> <li>3.1 Screw Thread measurement: Two wire and three wire methods, fl carriage micrometer.</li> <li>3.2 Gear measurement: Gear tooth comparator, Master gears, measurement using rollers and Parkinson's Tester.</li> <li>3.3 Special measuring Equipment: Principles of measurement using Tool Maker's microscope, profile projector &amp; 3D coordinate measuring machine.</li> </ul>  | 07  |

| <b>PEDLO5011</b> | Internal Combustion Engines | 03      |

- 1. To familiarize with various types of internal combustion engines.
- 2. To impart knowledge about various systems/components of IC engines.
- 3. To impart knowledge about various engine performance characteristics and its testing.

- 1. Demonstrate working of different types of engines.
- 2. Analyze fuel supply systems and ignition systems of IC Engines.
- 3. Distinguish combustion process of SI and CI Engines.
- 4. Measure operating characteristics of IC Engines.
- 5. Analyze the impact of vehicular pollution and ways to reduce or control the pollution.
- 6. Illustrate various standard pollution norms like EURO, Bharat for I.C. engines.

|   | Module | Contents   | Hrs. |
|---|--------|--|------|
|   | 01     | <b>Introduction to IC Engines and cycle analysis:</b> Basic of I.C. Engines,<br>Details of two stroke and four stroke engines, Valve timing diagram,<br>Air standard cycles, Fuel air cycle and actual cycle. Variation in specific<br>heat, Dissociation and their effect on engine performance. Review of<br>other losses in IC engines.   | 07   |
|   | 02     | Spark Ignition EnginesFuel Supply System in S I Engines :Theory of Carburetion, Types of carburetors, Electronic fuel injectionsystem (MPFI),Combustion in Spark Ignition Engines: Stages of combustion,ignition lag, flame propagation, factors affecting flame propagation,abnormal combustion, phenomenon of detonation in SI engines, effectof engine variables on detonation. Combustion chambers. Rating offuels in SI engines.  | 07   |

|    | I.C. engines,  |    |

#### **Internal Assessment for 20 marks:**

#### Consisting Two Compulsory Class Tests

First test based on approximately 40% of contents and second test based on remaining contents (approximately 40% but excluding contents covered in Test I)

#### **End Semester Examination:**

Weightage of each module in end semester examination will be proportional to number of respective lecture hours mentioned in the curriculum.

- 1. Question paper will comprise of total six questions, each carrying 20 marks
- 2. Question 1 will be compulsory and should cover maximum contents of the curriculum
- 3. **Remaining questions will be mixed in nature** (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four questions need to be solved

#### **Reference Books:**

| PEDLO5012   | Finite Element Analysis | 03      |

- 1. To introduce the concepts of Mathematical Modelling of Engineering Problems.
- 2. To familiarize with the applicability of FEM to a range of Engineering Problems.
- 3. To acquaint with the applications of numerical techniques for solving problems.

- 1. Solve ordinary and partial differential equations using the Galerkin method.
- 2. Develop the finite element equations to model engineering problems governed by 2nd order partial differential equations.
- 3. Apply the basic finite element formulation techniques to solve engineering problems.
- 4. Use commercial FEA software, to solve problems related to engineering.
- 5. Prepare Solutions of 2 -D Problems using FE Software.
- 6. Find solution techniques to Dynamic problems, longitudinal vibration, frequencies and mode shapes.

| Module | Contents   | Hrs. |
|--------|--|------|
| 01     | <ul> <li>Introduction</li> <li>1.1. Introductory Concepts: Introduction to FEM, Historical Background, General FEM procedure. Applications of FEM in various fields. Advantages and disadvantages of FEM.</li> <li>1.2. Mathematical Modeling of field problems in Engineering, Governing Equations, Differential Equations in different fields.</li> <li>1.3 Approximate solution of differential equations Weighted residual techniques, Galerkin methods.</li> </ul>  | 09   |
| 02     | <b>FEA Procedure</b><br>2.1Discrete and continuous models, Weighted Residual Methods –Ritz<br>Technique –Basic concepts of the Finite Element Method.<br>2.2.Definitions of various terms used in FEM like element, order of the<br>element, internal and external node/s, degree of freedom, primary and<br>secondary variables, boundary conditions.<br>2.3. Minimization of a functional. Principle of minimum total potential.<br>Piecewise Rayleigh-Ritz method. Formulation of "stiffness matrix";<br>transformation and assembly concepts.  | 05   |
| 03     | One-Dimensional Problems<br>3.1.One Dimensional Second Order Equations<br>Discretization–Element types-Linear and Higher order Elements –<br>Derivation of Shape functions and Stiffness matrices and force vectors.<br>3.2.Assembly of Matrices -solution of problems in one dimensional<br>structural analysis, heat transfer and fluid flow (Stepped and Taper Bars,<br>Fluid Network, Spring-Cart systems)<br>3.3. Analysis of Plane Trusses, Analysis of Beams.<br>3.4.Solution of one Dimensional structural and thermal problems using<br>FE Software, Selection of suitable Element Type, Modeling, Meshing, | 10   |

|    | Boundary Condition Convergence of solution Result analysis Case          |    |   |

| PEDLO5013   | Plastics Engineering | 03      |

- 1. To familiarize with the vast potential of plastics materials in domestic engineering and specialty application areas.
- 2. To familiarize with the various processing techniques.
- 3. To familiarize with the design of moulds and dies.

- 1. Illustrate the various applications of plastics.
- 2. Demonstrate applicability of plastics in place of conventional materials.
- 3. Design various tools for plastics processing.
- 4. Illustrate various plastic processing techniques.
- 5. Design different types of moulds with their application.
- 6. Demonstrate trouble shooting skills in manufacturing plastic parts.

| Module | Contents  | Hrs. |
|--------|---|------|
| 01     | Materials<br>Brief introduction to plastics materials, their classifications, types<br>important properties & fields of application. Introduction to plastics<br>blends, alloys and composites. Principles of recycling of plastics and<br>waste management   | 04   |
|        | <ul> <li>Processing Techniques</li> <li>2.1 Injection Moulding</li> <li>Moulding materials, moulding cycle-phases, and significance. Moulding Machinery: types, constructional and design features, plasticizing screw, injection and clamping units, Technical specifications and selection.</li> <li>Processing Techniques: Process parameters and their influence on product quality, trouble shooting.</li> <li>2.2 Extrusion Process</li> <li>Constructional and design features of extrusion machinery plasticizing screw. Technical specification and selection. Extrusion lines for pipes, Films (monolayer and multilayer, blown and cast films), sheets, Extrusion coating, monofilaments, box strapping, cables/wires and profiles.</li> <li>[Coverage for the above should include materials, plant layouts, in line equipment, extrusion techniques, process parameter and their influence on extruded products and trouble shooting).</li> <li>2.3 Blow Moulding</li> <li>Materials for blow moulding application, Types of Machinery, technical specifications and selection. (Extrusion Blow Moulding, Injection blow moulding and stretch Blow moulding).</li> <li>Processing Techniques: Process parameters and their influence on product quality, troubleshooting Comparison between types of Blow Moulding Processes.</li> </ul> | 10   |

| <b>PEDLO5014</b> | Micro And Nano Manufacturing | 03      |

- 1. To familiarize with the applications of various Micro and Nano manufacturing technologies.
- 2. To familiarize with traditional Micro and Nano machining.
- 3. To familiarize with Non-traditional Micro machining methods.
- 4. To familiarize with Micro Forming and Welding techniques.
- 5. To familiarize with various processes used for Nano finishing and carbon nano tube production.

## Outcomes: Learner will be able to...

- 1. Demonstrate understanding of various traditional/non- traditional micro and nano machining methods.
- 2. Demonstrate understanding of various micro forming/welding techniques.
- 3. Demonstrate understanding of various nano finishing/carbon nano tube production methods.

01

- 4. Illustrate the details of various Micro Forming and Welding techniques.
- 5. Demonstrate various Nano Finishing Techniques used in industries.
- 6. Illustrate various Carbon Nanotube Production processes applicable in industries.

| PEDLO5015   | Sustainable Manufacturing | 03      |

- 1. To introduce basic concepts related to sustainability and sustainable development.
- 2. To get conversant with indigenous and global concerns about sustainability and its implications in manufacturing.
- 3. To familiarize with various technological innovations, approaches & environmental standards /legislations to promote sustainable development.

- 1. Illustrate the agenda of indigenous and global sustainability to fulfil green expectations.
- 2. Demonstrate the knowledge about management of waste, pollution & energy conservation.
- 3. Demonstrate the knowledge of sustainability issues with its implementation in manufacturing.
- 4. Illustrate the relevance and implications of environment friendly materials.
- 5. Illustrate the implications of environment management in the context of modern industrial practices.
- 6. Develop the sustainability approach in environmental strategy and manufacturing.

| Mo | odule | Contents  | Hrs. |

| <b>PEL501</b> | Design of Mould & Metal Forming Tools | 01      |
|               | Laboratory                            |         |

- 1. To prepare a study on sand moulds and pressure die casting dies.
- 2. To prepare a study on multi impression forging dies and roll passes.
- 3. To prepare a study on design & draw sand moulds and die casting dies.
- 4. To prepare a study on design & draw multi impression forging dies and roll pass grooves.

#### Outcomes: Learner will be able to...

- 1. Illustrate various forming and casting processes used in manufacturing of components.
- 2. Classify the equipment's and machines used in manufacturing processes, such as casting, rolling, forging, extrusion and wire drawing.
- 3. Design and draw the moulds required for castings/ pressure die casting processes.
- 4. Design and draw the dies required for forging processes.
- 5. Design and draw the grooves required for rolling processes.
- 6. Demonstrate various trends in the foundry/forging industries.

| Sr.no | Design Exercise/Assignments            |
|-------|--|
| 01    | Assignment on Sand casting             |
| 02    | Assignment on Special casting process. |
| 03    | Assignment on Extrusion process.       |
| 05    | Design of sand casting moulds.         |
| 06    | Design of Pressure die casting dies.   |
| 07    | Design of Forging dies.                |
| 08    | Design of Roll pass grooves.           |

## **Term Work**

Term work shall consist of exercises listed in the above table and also a detailed report based on an Industrial visit to a Casting/Forging plant.

The distribution of marks for term work shall be as follows:

| Assignments  | : <b>07</b> marks |
|--|-------------------|
| Industrial visit Report                                  | : <b>03</b> marks |
| Design Exercises with Drawings (scaled model) on A4 size | : <b>15</b> marks |
| Attendance   | : <b>05</b> marks |

The final certification and acceptance of term work ensures the satisfactory performance of laboratory work and minimum passing in the term work.

## **Oral Examination**

1. Oral examination shall be conducted based on term work and syllabus content.

2. Examiners are expected to give a small task or ask questions either to evaluate understanding of basic fundamentals or to evaluate their capability of applying basic theory to practical applications.

| Course Code   | Course Name                   | Credits |
|---------------|-------------------------------|---------|
| <b>PEL502</b> | Machine Design – I Laboratory | 01      |

- 1. To familiarize with basic principles of engineering design and design various machine components.
- 2. To familiarize with the use of design data books & various codes of practice.
- 3. To familiarize with the preparation of working drawings based on designs.

Outcomes: Learner will be able to...

- 1. Demonstrate various design considerations.
- 2. Apply basic principles of machine design.
- 3. Design machine elements.
- 4. Use design data books and various standard codes of practices.
- 5. Prepare drawings pertaining to various designs.
- 6. Design various joints used in engineering applications.

| Sr.no | Design Exercises/ Assignments  |
|-------|--|
| 01    | Design of Curved Beams   |
| 02    | Design of Bolted, Welded and Riveted Joints  |
| 03    | Design of Springs and Pressure Vessels   |
| 04    | Design of Socket and Spigot type Cotter Joint, Knuckle Joint, Turnbuckle (Any Two) |
| 05    | Design of Shafts (Two Design Problems)   |
| 06    | Design of Rigid Flange Coupling, Bush Pin Type of Flexible Coupling                |

## **Term Work**

Term work shall consist of exercises listed in the above list The distribution of marks for term work shall be as follows: Assignments Design Exercises with Drawings on A4 size Paper

Attendance

- : **10** marks : **10** marks
- . **10** marks
- : **05** marks

The final certification and acceptance of term work ensures the satisfactory performance of laboratory work and minimum passing in the term work.

## **Oral Examination**

1. Oral examination shall be conducted based on term work and syllabus content.

2. Examiners are expected to give a small task or ask questions either to evaluate understanding of basic fundamentals or to evaluate their capability of applying basic theory to practical applications.

Hilon

| Course Code | Course Name            | Credits |
|-------------|------------------------|---------|
| PEL503      | CAD/CAM/CIM Laboratory | 01      |

- 1. To introduce new and exciting field of Intelligent CAD/CAM/CAE with particular focus on engineering product design and manufacturing.
- 2. To develop a holistic view of initial competency in engineering design by modern computational methods.
- 3. To develop New API for CAD

Outcomes: Learner will be able to...

- 1. Identify proper computer graphics techniques for geometric modelling.
- 2. Transform, manipulate objects as well as store and manage data.
- 3. Create CAM Toolpath and prepare NC- G code
- 4. Apply rapid prototyping and tooling concepts in any real life applications.
- 5. Identify the tools for Analysis of a complex engineering component.

## **List of Exercises**

- 1. Programming for transformations,
- 2. API on Creating As built joints, Slider Joint Motion
- 3. Get the physical Properties API
- 4. Get the circle and arc data from the edge
- 5. Sketch spline through points creation : API
- 6. Solid modeling using any 3D modeling software
- 7. Part programming and part fabrication on CNC trainer (Turning / Milling)
- 8. Geometrical optimization of any mechanical component using computer aided engineering concepts. (Shape optimization)
- 9. Development of physical 3D mechanical structure using any one of the rapid prototyping processes.

## **Term Work**

Term work shall consist of

- a. Any four exercises from 1 to 6 of above list
- b. Part programming and part fabrication on CNC trainer
- c. A course project in a group of not more than four students based on 8 and 9 of above list

The distribution of marks for term work shall be as follows:

| • | Exercises      | : 15 Marks |
|---|----------------|------------|
| • | Course Project | : 05 Marks |
| • | Attendance     | : 05 Marks |

## Assessment:

## **End Semester Practical/Oral Examination:**

- 1. Each student will be given a small task of design based on syllabus, which will be assessed by pair of examiners during the oral examination.
- 2. Distribution of marks for practical-oral examination shall be as follows:

| Design Task: | 15 marks |
|--------------|----------|
| Oral:        | 10 marks |

- 3. Evaluation of practical/oral examination to be done based on the performance of design task
- 4. Students work along with evaluation report to be preserved till the next examination

| Course Code   | Course Name                       | Credits |
|---------------|-----------------------------------|---------|
| <b>PEL504</b> | Metrology And Quality Engineering | 01      |
|               | Laboratory                        |         |

- 1. To acquaint with the principles of precision measuring instruments & their significance.
- 2. To familiarize with the handling & use of precision measuring instruments / equipments.
- 3. To acquaint with key features and basics of the Total Quality Management philosophy.
- 4. To familiarize with various quality tools and their uses in solving the problems.

- 1. Handle & operate precision measuring instruments /equipment's.
- 2. Measure linear and angular measurements.
- 3. Measure thread and gear dimensions.
- 4. Design Go and Not Go gauge for given assembly.
- 5. Analyze simple machined components for dimensional stability & functionality.
- 6. Use proper quality tools in various manufacturing /service problems.
- 7. Use appropriate quality approaches for productivity improvement.
- 8. Comprehend and apply Quality standards in different situations.

| Sr. No. | Experiments/Assignments                         |
|---------|---|
|         | Any Five experiments                            |
| 01      | Use of linear and angular measuring instruments |
| 02      | Use of Profile projector.                       |
| 03      | Use of comparator.                              |
| 04      | Measurement of surface roughness.               |
| 05      | Measurement of flatness.                        |
| 06      | Thread measurement.                             |
| 07      | Gear measurement.                               |
|         | Assignment on any Six assignments               |
| 01      | Limits, Fits, Tolerance and Gauge Design.       |
| 02      | Comparators and Interferometers                 |
| 03      | Surface Roughness Measurement.                  |
| 04      | Thread Measurement                              |
| 05      | Gear Measurement                                |
| 06      | Total Quality Management                        |
| 07      | Statistical Quality Control                     |
| 08      | Quality Standards                               |

## **Term Work**

Term work shall consist of at least 1 assignment on each module from syllabus and minimum 05 experiments as per above list to be conducted and presented with inferences.

The distribution of marks for term work shall be as follows:

Laboratory work (Experiment/ programs and journal):

Assignments:

Attendance (Theory and Practical):

The final certification and acceptance of term work ensures the satisfactory performance of laboratory work and minimum passing in the term work.

## **Practical / Oral Examination**

- 1. Practical examination shall be conducted based on the list of experiments. Examination shall be based on actual handling of instruments and accurate measurement of given parameters.
- 2. Examiners are expected to evaluate learners' skill of handling the instruments and accurate measurement of asked parameters and conduct oral based on the syllabus.
- 3. The distribution of marks for practical/oral examination shall be as follows:
  - a. Practical performance ..... 15 marks
  - b. Oral ......10 marks
- 4. Students work along with evaluation report to be preserved till the next examination.

| <b>PEL505</b> | <b>Business Communication &amp; Ethics</b> | 02      |

- 1. To inculcate professional and ethical attitude at the workplace
- 2. To enhance effective communication and interpersonal skills
- 3. To build multidisciplinary approach towards all life tasks
- 4. To hone analytical and logical skills for problem-solving

- 1. Design a technical document using precise language, suitable vocabulary and apt style.
- 2. Develop the life skills/ interpersonal skills to progress professionally by building stronger relationships.
- 3. Demonstrate awareness of contemporary issues knowledge of professional and ethical responsibilities.
- 4. Apply the traits of a suitable candidate for a job/higher education, upon being trained in the techniques of holding a group discussion, facing interviews and writing resume/SOP.
- 5. Deliver formal presentations effectively implementing the verbal and non-verbal skills

|-------------|----------------------------------|---------|
| PEC601      | Machining Science and Technology | 04      |

- 1. To familiarize with the basic concepts of machining science like mechanics of machining, tool wear, tool life and surface roughness.
- 2. To familiarize with various single and multipoint cutting tools designing processes
- 3. To prepare for understanding the economics of machining process.

- 1. Calculate the values of various forces involved in the machining operations.
- 2. Analyse the effect of temperature and cutting fluids in metal cutting.
- 3. Analyse the surface integrity after post machining.
- 4. Design various single/multipoint cutting tools.
- 5. Select an appropriate tool material for particular machining application.
- 6. Demonstrate the interrelationship between cutting parameters and machining performance measures.

| ſ | Module | Contents   | Hrs. |

## Internal Assessment for 20 marks:

#### Consisting Two Compulsory Class Tests

First test based on approximately 40% of contents and second test based on remaining contents (approximately 40% but excluding contents covered in Test I)

## **End** Semester Examination:

Weightage of each module in end semester examination will be proportional to number of respective lecture hours mentioned in the curriculum.

- 1. Question paper will comprise of total six questions, each carrying 20 marks
- 2. Question 1 will be compulsory and should cover maximum contents of the curriculum

3. **Remaining questions will be mixed in nature** (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)

4. Only Four questions need to be solved

## **Reference Books:**

- 1. *Fundamentals of Metal Machining and Machine Tools, Third Edition* by Winston A. Knight, Geoffrey Boothroyd, CRC press Taylor and Francis group (2006).
  - 2. *Metal Cutting Principles (2<sup>nd</sup> Edition)*, by Milton Clayton Shaw, Oxford University Press (2005).
  - 3. Cutting Tools, by P. H. Joshi, A. H. Wheeler Publishing Co. Ltd. (1991).
  - 4. ASM Handbook, Vol. 16: Machining (9<sup>th</sup> Edition), by Joseph R. Davis, ASM International(1989).

|---------------|--|---------|
| <b>PEC602</b> | <b>Process Engineering and Tooling</b> | 04      |

- 1. To familiarize with the significance of process engineering with its relevance to manufacturing operations.
- 2. To prepare a skills in preparing machining sequence and estimate manufacturing time.
- 3. To acquaint with the significance and control of tolerance in design & manufacturing.
- 4. To appraise with basics of process and operation planning.

- 1. Determine machine sequences to cater to the manufacturing requirements
- 2. Analyse part prints.
- 3. Prepare tolerance control charts with its balancing.
- 4. Design work holding devices for consistent positioning of work piece in relation to the tool.
- 5. Prepare process picture, process routing/process sheets.
- 6. Design cams for part production on single spindle automats.

| Module | Contents  | Hrs. |
|--------|---|------|
| 01     | <b>Process Engineering</b><br>Differentiation between Product Engg and Process Engg. Role of process<br>engineering in a manufacturing setup, organization chart, functions of<br>process engineering. Determining machining sequences - criteria and<br>manufacturing sequence.  | 04   |
| 02     | <ul> <li>2.1Preliminary Part Print Analysis</li> <li>General characteristics, determining the principal processes, alternate processes, functional surfaces of the work piece, areas for processing, nature of work to be performed, finishing and identifying operations, case study for understanding preliminary part print analysis.</li> <li>2.2 Work piece control</li> <li>Causes of work-piece variations, variables influencing work-piece control, work piece control techniques - Equilibrium theories, concept of location, geometric control, dimensional control, mechanical control, alternate location theory.</li> </ul> | 08   |
| 03     | <b>Tolerance Design</b><br><b>Dimensional Analysis:</b> Types of dimensions, concept of baseline<br>dimension, basic geometric dimensioning and tolerance (GD & T).<br><b>Tolerance Analysis:</b> Rules for adding and subtracting tolerance, tolerance<br>stacks, design and process tolerance stacks, tolerance chart, purpose and use<br>of tolerance chart, definitions and symbols, determining lay–out of tolerance<br>chart, stock removal, constructing and balancing of tolerance chart.   | 08   |
| 04     | <ul> <li>Process planning</li> <li>4.1 Classifying operations (Study of Basic Processes Operations, Principal Processes and Auxiliary Processes, identification of major, critical, qualifying, re-qualifying and supporting operations), product and process critical area, selection of equipment and Tooling.</li> <li>4.2 Computer Aided Process Planning (CAPP): CAPP -variant approach and generative approach.(Detail)</li> </ul>  | 06   |

|     | 5.1 Operation Planning   |    |
|-----|--|----|
|     | Process plan sheet design for complete manufacturing part with details of    |    |
|     | sequence of operations, machine or equipment used, Process pictures,         |    |
|     | machining parameters i.e. cutting speed, feed, depth of cut, tooling and     |    |
| 05  | gauge details, cutting tools specifications and gauge details machining time | 12 |
|     | calculations. Tool layout for turning on production lathe.                   |    |

| <b>PEC603</b> | Production Tooling | 04      |

- 1. To acquaint with the concepts pertaining to planning and sequencing of operations.
- 2. To familiarize with the capabilities of designing a simple productive and cost effective jigs and fixtures
- 3. To acquaint with the various press working operations for mass production of sheet metal components.
- 4. To familiarize with the sheet metal working techniques for design of press tools.

- 1. Select location and clamping faces/points on jobs.
- 2. Design and develop simple productive and cost effective jigs.
- 3. Design and develop simple productive and cost effective fixtures.
- 4. Identify press tool requirements to build concepts pertaining to design of press tools.
- 5. Prepare working drawings and setup for economic production of sheet metal components.
- 6. Demonstrate the principles of blank development in bent & drawn components.

| Module | Contents   | Hrs |
|--------|--|-----|
| 01     | <ul> <li>Introduction to Jigs and Fixture:</li> <li>1.1Introduction to Jigs and Fixtures, their difference and Significance.<br/>Material used for different elements of jigs/fixtures and recommended hardness where necessary.</li> <li>1.2Location &amp; Locating Devices: Locating principles, Degrees of freedom, Redundant location, Fool proofing, nesting, Locators: location from Flat and cylindrical surfaces, conical locators, centralizers.</li> <li>1.3Clamping &amp; clamping Devices: Clamping Principle, Examples of typical clamps such as multiple clamping and equalizing devices, quick acting clamping mechanisms such as link, toggle, cam, eccentric, pneumatic &amp; hydraulic devices.</li> </ul> | 08  |
| 02     | <ul> <li>Construction of Drill Jig</li> <li>2.1 Introduction, Selection of location, supporting and clamping faces/points.</li> <li>2.2 Various types of Jig Bushes.</li> <li>2.3 Commonly used Drill jigs. Case Study on Drill Jig Design.</li> </ul>   | 08  |
| 03     | <ul> <li>Construction of Milling fixture</li> <li>3.1 Introduction, Selection of location, supporting and clamping faces/points.</li> <li>3.2 Tool setting &amp;cutter guiding (Tennons &amp; Setting block).</li> <li>3.3 Case Study on Milling Fixture Design.</li> </ul>  | 08  |

| 04 | <ul> <li>Introduction to Press Working</li> <li>4.1Classification of common Press working operations, Benefits and limitations of using Press tools. Applications of pressed parts/components.</li> <li>4.2 Theory of Shearing in Press Working. Optimum Cutting clearance Construction of Basic shearing die. Functions of different elements of a press tool. Methods of feeding the strip/coil material.</li> </ul>  | 06 |
|----|---|----|
| 05 | <ul> <li>Design and Calculations for Piercing &amp; Blanking Die</li> <li>5.1 Different types of Dies, Die sets and its selection.</li> <li>5.2 Calculations for Economic Strip Layout, Calculations of Cutting force and Stripping force. Recommending minimum tonnage of a press. Centre of Pressure (its importance and calculation).</li> <li>5.3 Design aspects of Press tool elements viz. Punches &amp; methods of retaining punches, Die block, Stripper, Pilot, etc. Methods of reducing cutting loads on press tools.</li> <li>5.4 Selection of materials and its hardness for different elements of Press tools.</li> </ul>                            | 10 |
| 06 | <ul> <li>Bending &amp; Drawing Dies</li> <li>6.1 Theory of Bending. Spring back and measures to control it. Calculations for bending force &amp; Blank development of Simple Bent components. Types of Bending dies. Minimum bend radius.</li> <li>6.2 Theory of Drawing. Metal flow in Drawing &amp; forming operations; reduction ratio and redrawing limits, draw clearance, drawing and blank holding forces for cylindrical draws only. Blank development of Cup.</li> <li>6.3 Defects in drawn as well as bent parts. Presses selection for drawing/bending operations.</li> <li>6.4 Basic construction and working of Bending and Drawing dies.</li> </ul> | 08 |

|---------------|---------------------|---------|
| <b>PEC604</b> | Machine Design - II | 04      |

- 1. To familiarize with the constructional & design features of machine tool structures like bed, columns, slide ways/guideways and mechanical drives.
- 2. To prepare for a skills in designing feed gear boxes, bearings, power screws, clutches etc. used in machine tools.
- 3. To acquaint with the usage of standards & hand books and retrieve relevant data from these for designing/selection of machine tool components.
- 4. To appraise about safety and safety standards pertaining to machine tools.
- 5. To acquaint with the recommended procedure of carrying out acceptance tests on machine tools & their significance.

- 1. Design machine tool structures, drive elements/drives.
- 2. Design feed gear boxes.
- 3. Design power screws and clutches.
- 4. Design bearings.
- 5. Demonstrate the requirements like maintaining of expected accuracy levels, parametric optimization, managing wear and tear problems.
- 6. Illustrate the safety aspects/ acceptance tests in machining tools.

| Module |
|--------|
| 01     |

|   | DESIGN OF SPEED AND FEED BOXES  |     |   |
|---|---|-----|---|
| 0 | 2.1Stepped and Stepless speed outputs, selection of spindle speed ranges,             |     |   |
|   | construction of structural, speed, gearing & deviation diagrams, layout of            |     |   |
|   | speeds on arithmetic and geometric progression, kinematic advantages of               |     |   |
|   | geometric progression series, selection of values of common ratio.                    |     |   |
|   | <b>2.2Stepless drives :</b> Mechanical stepless drives – single disc, double disc     |     |   |
|   | and cone disc transmissions, speed regulation by epicyclic gear train,                | 16  |   |
|   | positive infinitely variable drives (PIV drives) - Kopp's, Meander and                | 10  | 1 |
|   | Svetozarav's drives.  |     |   |
|   | <b>2.3Feed boxes:</b> Quadrant change gear mechanism, speed boxes with gear           |     |   |
|   | cone and sliding key, Norton gear drive, Meander gear drives, gear boxes              |     |   |
|   | with clutched drive, Schopke drive and Ruppert drive.                                 |     |   |
|   | <b>2.4Design of gear boxes</b> for feed and speeds having 2–3 stages and 4–12         |     |   |
|   | speeds.   | r   |   |
|   | DESIGN OF POWER SCREWS  |     |   |
| 0 | <b>3.1 Design of power screws</b> : Materials of construction. Power screw profiles   |     |   |
|   | and selection, design of machine tool power screws based on strength,                 | 04  |   |
|   | buckling and stiffness, power requirements and efficiency, mounting of                |     |   |
|   | power screws, Elementary treatment on ball recirculating power screws.                |     |   |
|   | DESIGN OF CLUTCHES  |     |   |
| 0 | 4.1 Design considerations, materials of clutch plates & linings. Running              |     |   |
|   | conditions- wet & dry.  | 04  |   |
|   | 4.2 Design of plate clutches. Single and multiplate clutches involving design         |     |   |
|   | of clutch plates, springs & operating lever.  |     |   |
|   | DESIGN OF MACHINE TOOL BEARINGS   |     |   |
| 0 | Bearing materials & their characteristics. Types of bearings- selection &             |     |   |
|   | application.  |     |   |
|   | <b>5.1 Design of ball &amp; roller bearings</b> – Bearing designation (ISI, ISO, SAE, |     |   |
|   | and SKF). Calculation of equivalent load, cubic mean load, static & dynamic           | . – |   |
|   | load bearing capacities. Selection of ball & roller bearing from handbook.            | 07  |   |
|   | Mounting & maintenance of bearings.   |     |   |
|   | 5.2 Design of journal bearings – Terminology. Theory of lubrication,                  |     |   |
|   | bearing characteristic Number, Sommerfeld Number, calculations involving              |     |   |
|   | bearing dimensions, clearance, coefficient of friction, heat generated, heat          |     |   |
| - | dissipated and power lost in friction. Mounting & maintenance of bearings.            |     |   |
|   | SAFETY OF MACHINE TOOLS & ACCEPTANCE TESTS  |     |   |
| 0 | 6.1 Safety concepts, various safety devices incorporated in machine tools to          |     |   |
|   | safeguard safety of man, tools and equipment. Interlocked, fool proof safety          |     |   |
|   | systems. Introduction to safety standards.  |     |   |
|   | 0.2 Acceptance tests on machine tools :   | 05  |   |
| - | Significance, performance and geometrical tests on lathe, milling, drilling           |     |   |
| - | and snaping machines.   |     |   |
|   | 0.5 vibrations in machine tools:- Elementary concepts about factors                   |     |   |
|   | controuting to vibrations, vibration detection and measurement, remedial              |     |   |
|   | approaches  |     |   |

## NOTE:

Use of standard design data books like PSG data book is permitted at the examination and shall be supplied by the college.

| <b>PEC605</b> | <b>Production and Operations Management</b> | 04      |

- 1. To prepare for understanding of the role of production and operations management in the overall business strategy of the firm.
- 2. To prepare for understanding of the interdependence of the operating system with other key functional areas of the firm.
- 3. To familiarize with the key factors and interdependence of these factors in the design of effective operating systems.
- 4. To prepare for identification and evaluation of tools appropriate for analysis of operating systems of the firm.
- 5. To familiarize with the application of production and operations management policies and techniques to the service sector as well as manufacturing firms.

- 1. Analyze implications of Production and Operations Management in industries.
- 2. Demonstrate the role of Production Management in creating competitive advantage for business organizations.
- 3. Analyze various constituents of production operations in manufacturing and service.
- 4. Plan and control various production related activities.
- 5. Illustrate various inventory management procedures with the tools employed there in.
- 6. Demonstrate role of JIT, MRP, and ERP with their contribution towards production and operations management.

| Module | Contents   | Hrs. |
|--------|--|------|
| 01     | Introduction<br>An overview of Production and Operations Management (POM),<br>Managing a Production System, Types of Production Systems,<br>Significance of Productivity, Decision making in POM, Problems in<br>POM, Sub functional areas of POM, Recent trends in POM.<br>Product Planning and Development (PPD)   | 06   |
| 02     | What is a Product?, Need, Objectives and Challenges of PPD,<br>characteristics of Successful Product Development, New Product<br>development Strategy and Process, Factors to be considered in Product<br>Development, The Product Life Cycle Concept, Factors affecting Product<br>Design and Product Development, Stages in Product Design and Product<br>Development. | 06   |
| 03     | <b>3.1 Facility Location</b><br>The need for location decision, Procedure for making location decisions,<br>Factors affecting location decisions, Methods of evaluating location<br>decisions ( <b>numerical on this topic</b> )   | 08   |

|            | 3.2 Facility Layout / Plant Layout                                       |    |
|------------|--|----|
|            | Types of Layout, Significance and Factors influencing layout choices,    |    |
|            | Principles of Plant layout, Computerised Layout Techniques.              |    |
|            | 3.3 Materials Handling   |    |
|            | Function, Importance and Objectives of Material Handling, Material       |    |
|            | handling Principles, Types of Material Handling Systems, Selection of    |    |
|            | Material Handling Equipments, Evaluation of Material handling            |    |
|            | Performance Relationship with Plant layout (numerical on this topic).    |    |
|            | Production Planning and Control  |    |
| 04         | Classification of PPC functions, Factors determining PPC, procedure      | 06 |
|            | Role of PPC in POM, Principles of PPC, PPC in different Production       |    |
|            | System, Organisation of PPC department.                                  |    |
|            | Inventory Management   |    |
|            | Nature, Importance, Classification and Functions of Inventory, Inventory |    |
|            | Costs, Importance of Inventory Management, Inventory Control System      |    |
| 0 <b>-</b> | for Dependent Demand and Independent Demand, Inventory Ordering          |    |
| 05         | Systems. Inventory Control subject to Known Demand. The EOQ Model,       | 12 |
|            | Extension to Finite Production Rate, Quantity Discount Model             |    |
|            | (numerical on this topic). Inventory Control subject to Uncertain        |    |
|            | Demand, The Newsboy Model, Service Levels in Q and R Systems,            |    |
|            | (numerical on this topic)  |    |
|            | Advance Topics in POM  |    |
|            | Material Requirement Planning (MRP) (numerical on this topic),           |    |
| 0.6        | Manufacturing Resource Planning (MRP II), Enterprise Resource            | 10 |
| 06         | Planning (ERP), Just in Time Manufacturing, Lean Production, Agile       | 12 |
|            | Manufacturing, Line Balancing (numerical on this topic), Line of         |    |
|            | Balance (numerical on this topic), Sustainable Production and Green      |    |
|            | Manufacturing.   |    |

Internal Assessment for 20 marks:

Consisting Two Compulsory Class Tests

First test based on approximately 40% of contents and second test based on remaining contents (approximately 40% but excluding contents covered in Test I)

#### **End Semester Examination:**

Weightage of each module in end semester examination will be proportional to number of respective lecture hours mentioned in the curriculum.

- 1. Question paper will comprise of total six questions, each carrying 20 marks
- 2. Question 1 will be compulsory and should cover maximum contents of the curriculum
- 3. **Remaining questions will be mixed in nature** (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four questions need to be solved

## **Reference Books:**

- 1. Production and Operations analysis by Steven Nahmias, McGraw-Hill/Irwin publication
- 2. Facilities Planning 4th Edition by James A. Tompkins, John Wiley and Sons Inc.
- 3. Elements Of Production Planning And Control by Eilon, Samuel, New York: Macmillan
- 4. *Production Planning and Control* by Prof. Jhamb L.C. by Everest Publishing House
- 5. Production ( Operations ) Management by Prof. Jhamb L.C. by Everest Publishing House
- 6. Inventory Management Prof. Jhamb L.C. by Everest Publishing House
- 7. Operations Management- an Integrated Approach 5th Edition by R. Dan Reid, Wiley,
- 8. Production and Operations Management by R. Panneerselvam, Prentice-Hall Of India
- 9. Operations Management for Competitive Advantage by Richard B. Chase, MGH
- 10. Orlicky's Material Requirements Planning, by Carol Ptak, MGH
- 11. Enterprise resource planning: concepts and practice by Vinodkumar Garg PHI Learning
- 12. Lean Thinking: Banish Waste and Create Wealth in Your Corporation, by James P. Womack, Free Press
- 13. Toyota Production System: An Integrated Approach to Just-In-Time, Yasuhiro Monden ,CRC PRESS

| <b>PEDLO6011</b> | Manufacturing Planning and Control | 03      |

- 1. To provide a profound insights into how to coordinate the supply, production and distribution functions.
- 2. To provide an insight in knowhow to balance a conflicting objectives to minimize the total costs involved and maximize customer service.
- 3. To prepare for analytical abilities to formulate, solve and analyze problems arising in modern production and inventory systems.

- 1. Analyze all aspects of a successful manufacturing planning and control infrastructure.
- 2. Design demand management scheme.
- 3. Illustrate the significance of sales and operations planning.
- 4. Design and oversee an effective master production schedule.
- 5. Design materials requirements planning.
- 6. Analyze capacity planning and management.

|-------------|--------------------------------|---------|
| PEDLO6013   | <b>Reliability Engineering</b> | 03      |

- 1. To introduce the basic concepts of Reliability Engineering for ensuring sustainable product management.
- 2. To familiarize with the application of engineering knowledge and statistical techniques to prevent or to reduce the likelihood of frequency of failure.
- 3. To familiarize with the reliability of new designs and its analysis based on data.
- 4. To familiarize the concept of reliability testing and simple calculations.

- 1. Analyze different modes of failure with its interpretations.
- 2. Demonstrate an integrated approach for achieving optimum product reliability.
- 3. Select appropriate reliability testing method/report failure.
- 4. Demonstrate the concept of reliability predication and analysis techniques.
- 5. Illustrate the concept of maintainability and availability related to reliability.
- 6. Illustrate the different corporate strategies for product reliability management.

|-------------|---------------------|---------|
| PEDLO6014   | Industrial Robotics | 03      |

- 1. To acquaint with the significance of robotic system in agile and automated manufacturing processes.
- 2. To familiarize with the robotic elements/ peripherals, their selection and interface.
- 3. To familiarize with the basics of robot kinematics.

- 1. Illustrate the importance of robot in automation.
- 2. Acquire skills in robot language and programming.
- 3. Acquire skill in robot task planning for problem solving.
- 4. Demonstrate the concepts of kinetics and dynamics of robot.
- 5. Select various sensors/robot peripherals for deployment in a manufacturing system.
- 6. Identify an application of robots in manufacturing.

#### Internal Assessment for 20 marks:

#### Consisting Two Compulsory Class Tests

First test based on approximately 40% of contents and second test based on remaining contents (approximately 40% but excluding contents covered in Test I)

#### **End Semester Examination:**

Weightage of each module in end semester examination will be proportional to number of respective lecture hours mentioned in the curriculum.

- 1. Question paper will comprise of total six questions, each carrying 20 marks
- 2. Question 1 will be compulsory and should cover maximum contents of the curriculum
- 3. **Remaining questions will be mixed in nature** (for example if Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four questions need to be solved

|---------------|---|---------|
| <b>PEL601</b> | Machining Science and Technology Laboratory | 01      |

- 1. To familiarize with the methods of force measurement during machining.
- 2. To familiarize with the methods of temperature measurement during machining.
- 3. To familiarize with the Taguchi's Design of Experiments and ANOVA.
- 4. To familiarize with the design procedures for various cutting tools.

#### Outcomes:-The learner will be able to...

- 1. Select a proper force measurement method for the required machining operation.
- 2. Select a proper temperature measurement method for the required machining operation.
- 3. Distinguish surface integrity after parametrical changes in machining operation.
- 4. Apply Taguchi's Design of Experiments and ANOVA for various machining operations.
- 5. Design multi point cutting tool like Broach.
- 6. Design of Flat Form Tool and Circular Form Tool.

| 05      | Design of Flat Form Tool.  |
| 06      | Design of Circular Form Tool.  |

## **Term Work**

Term work shall consist of exercises listed in the above list The distribution of marks for term work shall be as follows:

| Assignments                                     | : <b>10</b> marks |
|---|-------------------|
| Design Exercises with Drawings on A4 size Paper | : <b>10</b> marks |
| Attendance                                      | : <b>05</b> marks |

The final certification and acceptance of term work ensures the satisfactory performance of laboratory work and minimum passing in the term work.

| Course Code | Course Name                                       | Credits |
|-------------|---|---------|
| PEL602      | <b>Process Engineering and Tooling Laboratory</b> | 01      |

- 1. To familiarize with the significance of process engineering and its relevance to manufacturing operations.
- 2. To prepare for developing a skills in preparing machining sequence and estimating manufacturing time.
- 3. To acquaint with the significance and control of tolerance in design & manufacturing
- 4. To appraise a basics of process and operation planning.

Outcomes: Learner will be able to...

- 1. Develop capability to prepare part prints.
- 2. Develop workpiece control system.
- 3. Develop tolerance control charts and process sheets.
- 4. Develop tool layout for production Lathe.
- 5. Develop process picture, process routing, process sheets.
- 6. Design cams for part production on single spindle automats.

| 04    | Prepare Tolerance Chart Design for one component.   |
| 05    | Design of Tool Layout for production lathe.         |
| 06    | Design process planning sheet with process picture. |
| 07    | Design of Cams for Traub Automat.                   |

## Term Work

Term work shall consist of assignments based on the syllabus and exercises as mentioned in the table above as well as a detailed report, based on an Industrial visit to a manufacturing firm, covering few of the essential concepts mentioned in subject of Process Engineering and Tooling. The report should cover the importance of optimisation of various resources like Time, Material etc. in today's manufacturing firms.

The distribution of marks for term work shall be as follows:

| Design Exercise                                     | : 12 marks                 |
|---|----------------------------|
| Assignments   | : 05 marks                 |
| Industrial Visit Report                             | : 03 marks                 |
| Attendance (Theory and Practical)                   | : 05 marks                 |
| The final certification and acceptance of term work | ensures the satisfactory p |

The final certification and acceptance of term work ensures the satisfactory performance of Laboratory work and minimum passing in the term work.

## **Practical/Oral Examination**

Each student will be given a small exercise based on syllabus, which will be assessed/verified by examiners during the oral examination.

The distribution of marks for oral-practical examination shall be as follows:

Exercise : 15 marks

Oral : 10 marks

1. Evaluation of practical/oral examination to be done, based on the performance of design task.

2. Student's work along with evaluation report to be preserved till the next examination.

Nom

| Course Code   | Course Name                   | Credits |
|---------------|-------------------------------|---------|
| <b>PEL603</b> | Production Tooling Laboratory | 01      |

- 1. To acquaint with the concepts pertaining to planning and sequencing of operations.
- 2. To prepare for designing of simple productive and cost effective jigs and fixtures
- 3. To acquaint with the various press working operations for mass production of sheet metal components.
- 4. To familiarize with the sheet metal working techniques for design of press tools.

Outcomes: The students will be able to...

- 1. Identify and select location and clamping faces/points on jobs.
- 2. Design and develop simple productive and cost effective jigs.
- 3. Design and develop simple productive and cost effective fixtures.
- 4. Identify press tool requirements to build concepts pertaining to design of press tools.
- 5. Prepare working drawings and setup for economic production of sheet metal components.
- 6. Prepare bill of materilas..

## **Term Work**

Term work shall consist of:

- A : Design of
  - 1. Simple Progressive Die with minimum three stages. (Assembly & BOM)
  - 2. Drill Jig (Assembly & BOM).
  - 3. Milling fixture (Assembly & BOM).

B : A detailed report based on an Industrial visit to a manufacturing firm, covering the topics mentioned in subject of Production Tooling.

Assignments on topics drawn from the syllabus are as follows-

One assignment/module on module nos. 1, 2, 3 and 1 physical model/prototype (by a group of 4 students) on module 4, 5 or 6. OR

One assignment/module on module nos. 4, 5, 6 and 1 physical model/prototype (by a group of 4 students) on module 1, 2 or 3.

The distribution of marks for term work shall be as follows:

| Part A: Design task                                    | : 12 marks                      |
|--|---------------------------------|
| Part B: Assignments                                    | : 05 marks                      |
| Industrial Visit Report                                | : 03 marks                      |
| Attendance (Theory and Practical)                      | : 05 marks                      |
| a final certification and accontance of term work answ | as the setisfectory performance |

The final certification and acceptance of term work ensures the satisfactory performance of laboratory work and minimum passing in the term work.

## **Practical/Oral Examination**

Each student will be given a small task of design based on syllabus, which will be assessed/verified by examiners during the oral examination.

The distribution of marks for oral-practical examination shall be as follows:

Design Task...15Oral...10

- 1. Evaluation of practical/oral examination to be done based on the performance of design task.
- 2. Student's work along with evaluation report to be preserved till the next examination.

Nom

| Course Code   | Course Name                    | Credits |
|---------------|--------------------------------|---------|
| <b>PEL604</b> | Machine Design – II Laboratory | 01      |

- 1. To familiarize with the concept of design features of machine tool structures.
- 2. To acquaint with design principles of feed gear boxes, bearings, power screws, clutches etc. used in machine tools.
- 3. To acquaint with the standards & hand books to retrieve relevant data for designing/selection of machine tool components.
- 4. To acquaint with the acceptance tests on machine tools & their significance

Outcomes: Learner will be able to...

- 1. Use codes and hand books to retrieve relevant data for design and selection.
- 2. Design machine tool structures.
- 3. Select drive elements and drives for machine tools.
- 4. Design feed gear boxes for a machine tool.
- 5. Design bearings and clutches for a machine tool.
- 6. Design power screws for a machine tool.

| Sr.no | Design Exercise/ Assignment  |
|-------|--|
| 01    | Design of mechanical drives (At least one design and drawing)                                  |
| 02    | Design and drawing of machine tool guideways, slideway profiles, wear compensation techniques. |
| 03    | Design and drawing of machine tool structure profiles.   |
| 04    | Demonstration of acceptance test on at least one machine tool.                                 |
| 04    | Assignment on power screws.  |
| 05    | Assignment on clutches.  |
| 06    | Assignment each on antifriction bearing & journal bearing.                                     |

## **Term Work:**

Term work shall consist of design exercises and assignments as per the list given above The distribution of marks for term work shall be as follows:

| Laboratory work (Experiments/ design and drawings): | 15 marks  |
|---|-----------|
| Assignments:  | 05 marks  |
| Interest & involvement                              | 05 marks  |
| TOTAL:  | 25 Marks. |
|   |           |

The final certification and acceptance of term work ensures the satisfactory performance of laboratory work and minimum passing in the term work.
